## C2.6

1. LOCATION OF UTILITIES AND UNDERGROUND STRUCTURES ARE SHOWN AS APPROXIMATE ON THE CONTRACT DOCUMENTS
2. ALL UTILITIES SHALL BE LOCATED BY THE CONTRACTOR PRIOR TO BEGINNING CONSTRUCTION.
3. EXISTING UTILITIES SHALL BE PROTECTED AND SUPPORTED DURING CONSTRUCTION.
4. ALL WATER, GAS, CABLE, TELEPHONE, ELECTRIC, SEWER, AND OTHER UTILITIES FOUND TO INTERFERE WITH THE PROPOSED CONSTRUCTION SHALL BE RELOCATED IN A MANNER ACCEPTABLE TO THE ENGINEER.

1. SAND BEDDING MEETING REQUIREMENTS OF EARTHWORK SPECIFICATIONS
2. SAND BLANKET MEETING REQUIREMENTS OF EARTHWORK SPECIFICATIONS
3. FINAL FINAL BACKFILL MATERIAL - MATERIAL WILL EXCLUDE PIECES OF PAVEMENT, ORGANIC MATTER, TOP SOIL, ALL WET OR SOFT MUCK, PEAT, CLAY, LARGE ROCKS (12" DIMENSION), OR ANY MATERIAL DETERMINED BY THE ENGINEER THAT WILL NOT BE SUITABLE

1. ONCE INSTALLED PERFORM A HYDROSTATIC AND LEAKAGE TEST ACCORDING TO AWWA C600(LATEST REVISION) ON EACH PIPE LINE.
2. THE ENGINEER AND THE WATER UTILITY SHALL BE GIVEN AT LEAST 72 HOURS NOTICE BEFORE THE TEST IS CONDUCTED. TEST MUST BE WITNESSED BY THE ENGINEER.
3. SPECIFIED TEST PRESSURE IS 200 PSI, AND PRESSURE DURING TEST SHALL NOT VARY BY MORE THAN 5 PSI.

**DUCTILE IRON PIPE, AWWA C151**

- 1. FITTINGS: CAST IRON, STANDARD THICKNESS, 350 psi PRESSURE RATING. (AWWA C110, C115, C105, ANSI A21.10).
- 2. FITTINGS: CAST IRON, 250 psi PRESSURE RATING (ANSI A21.10).
- 3. JOINTS: MECHANICAL, PUSH-ON AND FLANGED (AWWA C111, C115).
- 4. GASKETS:
  - A. MECHANICAL AND PUSH-ON JOINTS, ANSI A21.1.
  - F. FLANGED JOINTS: -2" THICK RING OR FULL FACED RUBBER, ANSI A21.5.
- 5. BOLTS/NUTS:
  - A. MECHANICAL JOINT, ANSI A21.1.1.
  - F. FLANGED JOINT, ANSI A21.5.
- 6. MECHANICAL JOINT GLANDS SHALL BE "MEEGA-LUG" RETAINER GLANDS.
- 7. LININGS AND LINING REPAIR TO AWWA/C104.
- 8. INTERIOR - CEMENT LINED. DOUBLE THICKNESS BITUMINOUS SEAL.
  - A. EXTERIOR - BITUMINOUS COATING APPROXIMATELY 2 MILS THICK, ANSI A21.5, ANSI A21.5, AND ANSI A21.10.
  - C. FLANGE MACHINED FACE COATING, ANSI A21.5.

1. TYPE-A, ANNEALED, ASTM B88
2. FITTINGS: ASME B16.18, CAST COPPER, OR ASME B16.22, WROUGHT COPPER.
3. JOINTS: COMPRESSION CONNECTION OR AWS A5.8, BCUP SILVER BRAZE.

CHLORINATION OF DOMESTIC WATER LINES

1. THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND THE WATER UTILITY AT LEAST 72 HOURS IN ADVANCE OF BEGINNING ANY DISINFECTION OF WATER MAINS.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR BACTERIOLOGICAL TESTING AS REQUIRED BY THIS SPECIFICATION AND REFERENCE STANDARDS MENTIONED.
3. DISINFECT ALL NEW PIPELINE SYSTEMS IN ACCORDANCE WITH AWWA C651, INCLUDING:
  - A. METHOD OF CHLORINE APPLICATION, USE CONTINUOUS FLOW METHOD OR SLUG METHOD. (TABLE METHOD IS NOT ACCEPTABLE.)
  - B. FORM OF CHLORINE UTILIZED.
  - C. FINAL FLUSHING.
  - D. BACTERIOLOGICAL TESTING
  - E. REPEITION OF PROCEDURE

1. RESILIENT SEAT GATE VALVES BY KENNEDY "KEN-SEAL" OR EQUIV.
2. IRON BODY GATE VALVES TO MEET AWWA C-509-87.
3. STEM CONSTRUCTION: NON-RISING.
4. STEM SEALS: DOUBLE O-RING.
5. GATE: CAST IRON RESILIENT WEDGE WITH SYNTHETIC ELASTOMER COATING, AND SHALL BE EPOXY COATED (FUSION BONDED) INSIDE AND OUT.
6. BONNET HARDWARE SHALL MEET ASTM A307, CADMIUM PLATED.
7. OUTLET CONNECTION: STANDARD MECHANICAL JOINT
8. OPERATION: OPEN TO THE RIGHT.

**TAPPING VALVES**

1. TAPPING VALVES TO MEET ANSI/AWWA C509-87, STANDARD FOR RESILIENT SEATED GATE VALVES.
2. VALVES SHALL HAVE A MINIMUM WORKING PRESSURE OF 150 PSI.
3. VALVES SHALL OPEN RIGHT (CONFIRM WITH DPW).
4. INLET FLANGES SHALL BE CLASS 125, ANSI B16.1, OR ANSI/AWWA C110/A21.10.
5. OUTLET CONNECTION: STANDARDIZED MECHANICAL JOINT.

7. STEM CONSTRUCTION: NON-RISEING.  
8. SEATING: PARALLEL SEAT  
9. END CONNECTIONS: MECHANICAL ON RUN, FLANGED ON BRANCH.  
10. BURIED TAPPING VALVES SHALL BE PROVIDED WITH A 2 INCH SQUARE WRENCH NUT AND CAST IRON VALVE BOX. IF DEPTH FROM GRADE TO TOP OF VALVE OPERATING NUT IS GREATER THAN 6'-0" A VALVE STEM RISER MADE OF HIGH STRENGTH STEEL SHALL BE PROVIDED, DEP FROM VALVE STEM RISER NUT TO GRADE WILL BE 4 TO 6 FEET.

1. AWWA C502, LATEST REVISION.
2. AWWA C207, CLASS D, MAX. WORKING PRESSURE OF 150 PSI.
3. SLEEVES: 3/4" NPT SLEEVES OF CAST IRON OR DUCTILE IRON.
4. MECHANICAL JOINT ENDS WITH END AND GASKET SEALS.
5. PROVIDE A 3" SPI TEST PIPES CL OR OTHER PROVISION FOR AIR TESTING THE VALVE AND JOINT AT MAXIMUM WORKING PRESSURE.
6. BOLTS AND NUTS, MECHANICAL JOINTS: HIGH STRENGTH CAST IRON OR HIGH STRENGTH LOW ALLOY STEEL. ANSIAWMA C1102/1-11/20, APPENDIX A.
7. BOLTS AND NUTS, FLANGED JOINTS: HIGH STRENGTH, LOW CARBON STEEL, CONFORMING TO ANSIAWMA C1102/1-11/20, APPENDIX A.
8. COAT ALL BOLTS AND NUTS WITH A RUST RESISTANT LUBRICANT.
9. ALL BOLTS AND NUTS USED WITH PIPE SLEEVES SHALL BE BRUSH COATED HEAVILY AFTER FINAL TIGHTENING WITH BITUMASTIC COAT-APPLIED MATERIAL TO THOROUGHLY COVER ALL EXPOSED SURFACES OF BOLTS AND NUTS.

1. ACCEPTABLE MANUFACTURER'S: MUELLER, CLOW, OR EQUAL.
2. CLOW F-2452 SLIDING TYPE, TWO PIECE, OR EQUAL.
3. 5 1/4 INCH SHAFT.
4. SIZE 664-A (40-60 INCH OVERALL LENGTH).
5. CAST IRON.
6. CLOW F-2490 LIDS OR EQUAL.
7. THE WORD "WATER" TO BE CAST INTO TOP OF COVERS, AND ARROW SHOWING DIRECTION OF OPENING.

NOTE:  
THE CITY OF BURLINGTON HOLDS THE RIGHT OF FIRST  
REFUSAL FOR ALL WATER SYSTEM WORK. COORDINATE  
WITH PUBLIC WORKS DEPARTMENT.

### C3.1

*Agreement*

[illegible]

75 Cherry Street  
Burlington, VT 05401

## Water Details and Notes

|                |                  |
|----------------|------------------|
| Project Number | Signature & Seal |
| 1317-01        |                  |
| Drawn By:      |                  |
| WC/JZ          |                  |
| Checked By:    |                  |
| JZ/KW          |                  |
| Scale:         |                  |
| As Noted       |                  |

DEPENDING ON WASTEWATER FLOW, IT MAY BE NECESSARY PLUG AN UPSTREAM MANHOLE AND PUMP WASTEWATER TO THE NEXT DOWNSLOPE STRUCTURE DURING MANHOLE INSTALLATION.

CONTRACTOR SHALL CONFORM TO GUIDELINES DETAILED IN THE VERNON STATE SPECIFICATIONS. CONTRACTOR IS RESPONSIBLE FOR READING AND FOLLOWING THE FULL COMPLETE EDITION PROVIDED BY THE STATE.

BUILDING SEWERS MUST BE CONSTRUCTED IN A MANNER WHICH WILL PREVENT LEAKING, BREAKING OR CLOGGING.

SIZE AND SLOPE: MINIMUM BUILDING SEWER SIZE IS 4 INCHES (UNLESS SHOWN ON THE PLAN) AND A MINIMUM SLOPE IS 1/4" PER FOOT.

CLEANOUTS: CLEANOUTS SHALL BE PROVIDED AT EACH HORIZONTAL CHANGE IN DIRECTION OF THE BUILDING SEWER GREATER THAN 45 DEGREES AND WHERE INDICATED ON THE DESIGN DRAWINGS. BUILDING SEWER CHANGES IN DIRECTION WHICH EXCEED 45 DEGREES SHOULD BE MADE WITH TWO 45 DEGREE ELBS OR LONG SWEEP FITTINGS. MANHOLES ARE ACCEPTABLE IN LIEU OF CLEANOUTS. WHERE BUILDING SEWERS ARE TO BE INSTALLED AT A DEPTH OF LESS THAN 5 FEET UNDER DRIVEWAYS ARE ANTICIPATED, EXTRA HEAVY CAST IRON PIPE SHALL BE USED.

LEAKAGE: BUILDING SEWERS SHALL MEET THE LEAKAGE STANDARDS PRESCRIBED IN THE STATE OF VERMONT SPECIFICATIONS (EPR- CHAPTER 1). SEE BELOW FOR MORE DETAIL.

| SLOPE, VELOCITY: ALL GRAVITY SEWER LINES SHALL BE INSTALLED WITH NOT LESS THAN THE SLOPES SHOWN BELOW: |                       |
|--------------------------------------------------------------------------------------------------------|-----------------------|
| PIPE SIZE (INCHES)                                                                                     | SLOPE (FEET/100 FEET) |
| 4"                                                                                                     | 2%                    |
| 6"                                                                                                     | 1%                    |
| 8"                                                                                                     | 0.4%                  |

CHANGES IN PIPE SIZE: WHEN A SMALLER SEWER JOINS A LARGER ONE, THE INVERT OF THE LARGER SEWER SHALL BE LOWERED SUFFICIENTLY TO MAINTAIN THE SAME ENERGY GRADIENT.

MATERIAL: PVC SDR 35, ASTM D3034, WITH PUSH-ON GASKETED JOINTS. GASKETS SHALL CONFORM TO ASTM D2122. SEWER JOINTS SHALL BE CONSTRUCTED TO MINIMIZE INFILTRATION AND TO PREVENT THE ENTRANCE OF ROOTS INTO THE SYSTEM.

TRENCHING: LEDGE, ROCK, BouldERS AND LARGE STONES SHALL BE REMOVED TO PROVIDE A MINIMUM CLEARANCE OF FOUR INCHES BELOW AND ON EACH SIDE OF ALL PIPES.

BEDDING: SEE TRENCH DETAIL DRAWING FOR MATERIALS. TRENCH BACKFILL SHALL BE OF A SUITABLE NATIVE MATERIAL FREE FROM DEBRIS, FROZEN MATERIAL, LARGE CLODS OR STONES, ORGANIC MATTER, OR OTHER UNSTABLE MATERIALS.

LEAKAGE TESTS: UPON COMPLETION OF SEWER LINE CONSTRUCTION, THE SEWER LINE SHALL BE TESTED IN ACCORDANCE WITH THE STATE OF VERMONT SPECIFICATIONS (EPR - CHAPTER 1, APPENDIX "A").

LEAKAGE TESTS FOR GRAVITY SEWERS

PLUG ALL OPENINGS IN THE TEST SECTION. ADD AIR UNTIL THE INTERNAL PRESSURE OF THE LINE IS RAISED TO APPROXIMATELY 4.0 POUNDS/SQUARE INCH (PSI) GREATER THAN THE AVERAGE PRESSURE OF ANY GROUND WATER. AFTER THIS PRESSURE IS REACHED, ALLOW THE PRESSURE TO STABILIZE. THE PRESSURE WILL NORMALLY DROP AS THE AIR TEMPERATURE STABILIZES. THIS USUALLY TAKES 2 TO 5 MINUTES DEPENDING ON THE PIPE SIZE. THE PRESSURE MAY BE REDUCED TO 3.5 PSI BEFORE STARTING THE TEST.

| PIPE SIZE (IN) | T (TIME) (MIN./100FT) |
|----------------|-----------------------|
| 3              | 0.2                   |
| 4              | 0.3                   |
| 6              | 0.7                   |
| 8              | 1.2                   |

- INSTALLATION:** PIPE SHALL BE LAID WITH BELL ENDS FACING UPGRADE AND LAYING SHALL START AT THE DOWNGRADE POINT.
- 4. WATER LINE SEPARATION**
- a. **HORIZONTAL SEPARATION:** SEWERS SHALL BE LAID FLAT AT LEAST TEN FEET HORIZONTAL FROM ANY EXISTING OR PROPOSED WATER MAIN. THE DISTANCE SHALL BE MEASURED EDGE TO EDGE.
- WHERE IMPOSSIBLE OR IMPRACTICABLE TO MAINTAIN THE TEN FOOT SEWER/WATER PIPE HORIZONTAL SEPARATION, DUE TO LEDGE, BOUNDERS OR OTHER UNUSUAL CONDITIONS) THE WATER LINE MAY BE IN A SEPARATE TRENCH OR ON AN EARTH SHELf IF THE SEWER TRENCH PROVIDED THAT THE BOTTOM OF THE WATER LINE IS AT LEAST 18 INCHES ABOVE THE TOP OF THE SEWER, WHEREVER IMPOSSIBLE OR IMPRACTICAL TO MAINTAIN THE 18 INCH VERTICAL SEPARATION, THE SEWER LINE SHALL BE CONSTRUCTED USING PRESSURE PIPE TO NORMAL WATER LINE STANDARDS AND PRESSURE TESTED TO 50 PSI FOR 15 MINUTE PRIOR TO BACKFILLING.
- b. **CROSSINGS:** SEWERS CROSSING WATER MAINS SHALL BE LAID BENEATH THE WATER MAIN WITH AT LEAST 18 INCHES VERTICAL CLEARANCE BETWEEN THE OUTSIDE OF THE SEWER AND THE OUTSIDE OF THE WATER MAIN, WHEN IT IS IMPOSSIBLE TO MAINTAIN THE 18 INCH VERTICAL SEPARATION, THE CROSSING SHALL BE ARRANGED SUCH THAT ONE FULL LENGTH OF SEWER IS CENTERED ABOVE OR BELOW THE WATER LINE WITH SEWER JOINTS AS FAR AWAY AS POSSIBLE FROM WATER JOINTS.
- c. THE SEWER PIPE MUST BE CONSTRUCTED TO WATER MAIN STANDARDS FOR A MINIMUM DISTANCE OF 20 FEET EITHER SIDE OF THE CROSSING OR AT LEAST THREE FULL LENGTHS, WHICHEVER IS GREATER.
- d. THE SECTION CONSTRUCTED TO WATER MAIN STANDARDS MUST BE PRESSURE TESTED TO MAINTAIN 50 PSI FOR 15 MINUTES WITHOUT LEAKAGE PRIOR TO BACKFILLING BEYOND ONE FOOT ABOVE THE PIPE TO ASSURE WATER TIGHTNESS.
- e. WHERE A WATER MAIN CROSSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT SHALL BE PROVIDED FOR THE SEWER TO PREVENT DAMAGE TO THE WATER MAIN.
- 5. MANHOLES**
- a. **DIAMETERS:** THE MINIMUM DIAMETER OF MANHOLES SHALL BE 48 INCHES. LARGE DIAMETERS ARE PREFERRED FOR CONNECTION TO LARGE DIAMETER SEWERS. A MINIMUM ACCESS DIAMETER OF 24 INCHES SHALL BE PROVIDED.
- b. **FLOW CHANNEL:** FLOW CHANNELS SHALL BE PROVIDED IN THE BASE OF ALL MANHOLES AND THE FLOW CHANNEL, THROUGH MANHOLES SHOULD BE MADE TO CONFORM IN SHAPE AND SLOPE TO THAT OF THE SEWERS.
- c. **MANHOLE SLABS** SHALL BE OF THE PRE-CAST CONCRETE OR POUR-IN-PLACE CONCRETE TYPE. MANHOLES SHALL BE WATERPROOFED ON THE EXTERIOR.
- d. INLET AND OUTLET PIPES SHALL BE JOINED TO THE MANHOLE WITH A RUBBER-GASKETED FLEXIBLE WATERTIGHT CONNECTION THAT ALLOWS DIFFERENTIAL SETTLEMENT OF THE PIPE AND MANHOLE WALL TO TAKE PLACE.
- e. ALL MANHOLES SHALL BE TESTED FOR LEAKAGE. LEAKAGE TESTING OF GRAVITY SEWERS UTILIZING THE WATER TESTING PROCEDURES TAKES INTO ACCOUNT THE LEAKAGE FROM ONE MANHOLE IN THE TEST SECTION. OTHERWISE, MANHOLES SHALL BE TESTED FOR LEAKAGE IN ACCORDANCE WITH THE FOLLOWING PROCEDURE:
1. PRIOR TO THE MANHOLE HAS BEEN ASSEMBLED IN PLACE. ALL LIFTING HOLES AND EXTERIOR JOINTS SHALL BE FILLED WITH AND POINTED WITH AN APPROPRIATE CURING MORTAR. ALL PIPES AND OTHER OPENINGS IN THE MANHOLE SHALL BE SUITABLY PLUGGED AND THE PLUGS PLACED TO PREVENT BLOWOUT.
- EACH MANHOLE SHALL BE CHECKED FOR INFILTRATION BY FILLING WITH WATER TO THE TOP OF THE CONE SECTION. A STABILIZATION PERIOD OF ONE HOUR ALLOW FOR INFILTRATION. AT THE END OF THIS PERIOD, THE MANHOLE SHALL BE REFILLED TO THE TOP OF THE CONE. IF NECESSARY, AND THE MEASURING TIME OF AT LEAST SIX HOURS BEGUN. AT THE END OF THE TEST PERIOD, THE MANHOLE SHALL BE REFILLED TO THE TOP OF THE CONE MEASURING THE VOLUME OF WATER ADDED. THIS AMOUNT SHALL BE CONVERTED TO A 24 HOUR RATE AND THE LEAKAGE DETERMINED ON THE BASIS OF DEPTH. THE LEAKAGE FOR EACH MANHOLE SHALL NOT EXCEED ONE GALLON PER VERTICAL FOOT FOR A 24 HOUR PERIOD FOR EXFILTRATION. THERE SHALL BE NO VISIBLE INFILTRATION. IF AN AIR TEST IS PERFORMED ON THE MANHOLE, INSTEAD OF THE WATER TEST, THE MANHOLE SHALL REMAIN UN-BACKFILLED DOWN TO THE SEWER LINE INVERTS DURING THE AIR TEST.

SCALE: NONE

### SANITARY SEWER TRENCH NOTES

1. UNLESS OTHERWISE NOTED, ASSUME CLASS "C" SOILS. PERFORM ALL EXCAVATIONS TO OSHA REQUIREMENTS.
2. BEGINNING TO PROVIDE A FIRM, STABLE, CONTINUOUS AND UNIFORM SUPPORT FOR FULL LENGTH OF TRENCH.
3. IF THE TRENCH DEPTH IS 4 FEET TO MINIMUM DEPTH TO 12 FEET, SHIELDING OR SHIELDING BEAMS ARE TO BE INSTALLED AT A DEPTH LESS THAN 3'-0" UNDER DRIVEWAYS, EXTRA HEAVY CANTON IRON OR OTHER HIGH STRENGTH PIPE SHALL BE USED TO PROTECT UNDER DRIVEWAYS.
4. FOR SEWER COLLECTION SYSTEMS THE MINIMUM DEPTH TO TOP OF THE PIPE SHALL BE 5'-0". THIS DEPTH SHALL BE INCREASED TO 6'-0" IN AREAS TO BE FLOWED DURING THE WINTER MONTHS. OTHERWISE, REFER TO INSULATION OVER SHIELDING LINE DETAIL.
5. BACKFILL SHALL BE OF A SUITABLE MATERIAL REMOVED FROM EXCAVATION EXCEPT WHERE OTHER MATERIAL IS SPECIFIED. ALL LARGE ROCKS AND ALL OTHER LARGE MATERIAL, OR OTHER UNSUITABLE MATERIALS SHALL NOT BE USED FOR BACKFILL WITHIN TWO FEET OF THE TOP OF THE PIPE.
6. ALL EXCESSIVE SOIL AND ROCK STORES SHALL BE REMOVED TO PROVIDE A MINIMUM CLEARANCE OF FOUR INCHES BELOW AND ON EACH SIDE OF ALL PIPES.

MANHOLE NOTES

1. PROVIDE SMOOTH SWEEPING TRANSITIONS BETWEEN INVERTS OF INTERSECTING PIPE.
2. IF DEPTH OF MANHOLE IS 7' OR LESS FROM RIM TO CENTERLINE INVERT, THEN A FLAT TOP WILL BE INSTALLED. IF DEPTH OF MANHOLE FROM RIM TO CENTERLINE INVERT IS MORE THAN 7 ft., THEN A CONICAL TOP WILL BE INSTALLED.
3. MANHOLE AND COVER SHALL BE DESIGNED FOR H2O LOADING.
4. INVERT TO BE FORMED AND POURED BY MANHOLE SUPPLIER UNLESS OTHERWISE APPROVED BY THE ENGINEER.

SCALE: NONE 

### WATER MAIN ABOVE SEWER

## SEPARATION NOTES

1. WATER MAIN RELATIONS TO SEWER SHALL BE IN ACCORDANCE WITH THE "RECOMMENDATIONS STANDARD FOR WATER WORKS" SO-CALLED TEN STATE STANDARDS.
2. WATER MAINS SHALL BE Laid AT LEAST 1' OFF HORIZONTALLY FROM ANY EXISTING OR PROPOSED SEWER MAINS. IF THE SEWER MAIN IS TO BE DEGRADED TO EDGE, IF THIS DISTANCE CANNOT BE OBTAINED, THEN THE PIPES SHALL BE INSTALLED IN A SEPARATE TRENCH AT AN ELEVATION SO THE BOTTOM OF THE WATER MAIN IS AT LEAST 18" INCHES ABOVE THE TOP OF THE SEWER.
3. WHEN IT IS IMPOSSIBLE TO MAINTAIN 18" VERTICAL SEPARATION OR WHERE THE SEWER MUST BE Laid 48" OR MORE BELOW THE WATER MAIN, THE SEWER MUST BE COVERED TO ONE FEET LENGTH OF SEWER IS CENTERED ABOVE OR BELOW THE WATER LINE WITH SEWER JOINTS AS FAR AS POSSIBLE FROM WATER JOINTS. 2" THE SEWER PIPE MUST BE CONSTRUCTED TO WATER MAIN DEPTH. THE SEWER PIPE SHALL BE COVERED WITH AT LEAST THREE (3) FEET OF THREE PIPE LENGTHS, WHICH EVER IS GREATER. 3" THE SECTION CONSTRUCTED TO WATER MAIN DEPTH MUST BE PRESURE TESTED TO FIFTY (50) PSF FOR 15 MINUTES TO PROVE THE SEWER JOINTS PROOF TO BACKFLOWS BEYOND ONE FOOT ABOVE THE PIPE TO ASSURE LEAK TIGHTNESS.

## SCALE: NONE (2)

SCALE: NONE

## KOR -N- SEAL NOTES

1. CORE HOLE SHALL BE SMOOTH, SYMMETRICAL, AND APPROPRIATELY SIZED FOR SEWER PIPE INSTALLATION.
2. RECONSTRUCT FLOW CHANNELS FOR NEW SEWER INLET PIPING.

## C3.2

- STORM DRAIN TRENCH NOTES**
1. UNLESS OTHERWISE NOTED, ASSUME CLASS "C" SOILS. PERFORM ALL EXCAVATIONS TO OSHA REQUIREMENTS.
  2. BEDDING TO PROVIDE A FIRM, STABLE, CONTINUOUS AND UNIFORM SUPPORT FOR THE FULL LENGTH OF PIPE.
  3. WHEN APPLICABLE, INSTALL PIPE WITH BELL ENDS DOWN SLOPE. PREVENT SEDIMENT FROM ENTERING NEW STORM DRAIN SYSTEM DURING CONSTRUCTION.
  4. NO MECHANICAL TAMPERS SHALL BE USED DIRECTLY OVER PIPE TO INSURE PIPE IS NOT DAMAGED.
  5. PROVIDE 6" OF COVER OVER PIPE IN PAVED AREAS AND 5" OF COVER OVER PIPE IN UNPAVED AREAS. REFER TO INSULATION DETAIL FOR AREAS WHERE PROPER COVER CAN NOT BE ACHIEVED.

TYPICAL STORM DRAIN TRENCH DETAIL

SCALE: NONE

1

- CATCH BASIN NOTES**
1. PROVIDE A LEBARON 24"x24" TYPE E OR EQUAL, 3 FLANGE GRATE AND FRAME NEXT TO CURBS AND 4 FLANGE GRATE AND FRAME AT ALL OTHER LOCATIONS.
  2. CATCH BASIN AND GRATE SHALL BE DESIGNED FOR H20 LOADING.

- NOTES:
1. CONTRACTOR IS RESPONSIBLE TO VERIFY ALL PLANT QUANTITIES FOUND IN THE PLANTING PLANS. IF ANY DISCREPANCIES ARE FOUND, LANDSCAPE ARCHITECT SHOULD BE NOTIFIED IMMEDIATELY.
  2. FINAL LAYOUT AND PLACEMENT OF ALL PLANT MATERIAL TO BE APPROVED BY THE LANDSCAPE ARCHITECT.
  3. REFER TO PLANTING DETAILS FOR PROPER PLANT MATERIAL INSTALLATION REQUIREMENTS.
  5. ALL TREE, SHRUB AND PERENNIAL PLANTING BEDS ARE TO BE CONTINUOUS, COMPLETELY DUG OUT AND BACKFILLED WITH THE PROPER PLANTING BED BACKFILL MATERIAL TO DEPTH SPECIFIED IN DETAILS AND SOIL PREPARATION SPECIFICATION.
  6. IF THE LANDSCAPE CONTRACTOR PROPOSES A SUBSTITUTE PLANT SPECIES, ALL SUBSTITUTES NEED TO BE APPROVED BY THE CITY ARBORIST AND LANDSCAPE ARCHITECT IN WRITING PRIOR TO ORDERING.
  7. FOR SOIL BACKFILL IN THE RAIN GARDEN BASINS, REFER TO CIVIL DRAWINGS, SPECIFICATIONS AND DETAILS.

**AVERAGE GRADE CALCULATIONS:**

**PINE STREET:**

$$\frac{211.71' + 212.80'}{2} = 212.26'$$

**CHERRY STREET:**

$$\frac{214.71' + 215.03'}{2} = 214.87'$$

**ST. PAUL STREET NORTH:**

$$\frac{216.36' + 216.90'}{2} = 216.63'$$

**ST. PAUL STREET SOUTH:**

$$\frac{212.68' + 213.32'}{2} = 213.01'$$

**BANK STREET SOUTH:**

$$\frac{207.88' + 209.29' + 210.69'}{3} = 209.29'$$

- LEGEND:**

### 1.4 NEIGHBORHOOD MEETING:

Per Zoning Section 3.5.2(b), pre-application neighborhood meetings were held. See FIGURE 1-A for affidavit, list of meeting dates, and meeting minutes.

## 2.0 NARRATIVE

### 2.1 PROJECT INTRODUCTION:

Devonwood Investors, LLC proposes to develop a multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District on the project site presently occupied by Burlington Town Center Mall at 49 Church Street. The site is currently spread across six parcels of land, and will be reconfigured into five, two of which will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul Street, between Cherry and Bank Streets (See Drawing C0.1 Adjusted Parcel Boundaries). The lot reconfiguration is a separate application. The proposed uses include retail, residential, office, and parking. The development consists of one building composed of a Base, a South Tower, and a North Tower.

### 2.2 DECONSTRUCTION (DEMOLITION) OVERVIEW:

Our limits of deconstruction will be framed by the existing street lines and building structures. Cherry Street will provide boundary to the North and Bank Street to the South. The 100 Bank Street building will anchor the southwest deconstruction limits and the Macy's building will provide terminus to the West. The L.L. Bean building and remaining mall structure will provide boundary to the East.

Site and building utilities will be cut and capped where serving the deconstruction areas and the project team will coordinate to maintain utilities for abutting properties. We will coordinate to ensure emergency egress and needs of all abutting properties are met throughout the course of construction.

As part of our LEED goals, we are seeking 75% or more diversion of recycled materials from the waste stream during the deconstruction process.

See Drawing AD-001 for drawing and photos.

### 2.3 DISTRICT SPECIFIC REGULATIONS: Zoning Section 4.5.8(c)1

Uses: Adjusted Parcel 2 is the lot bounded by Cherry, St. Paul, Bank, and Pine Streets exclusive of 100 Bank Street at the corner of Bank and Pine Streets. Square footage of Parcel 2 is 109,779. The total proposed square footage in subject Parcel 2 is 965,352, divided as follows:

|                          |                 |     |
|--------------------------|-----------------|-----|
| Retail:                  | 126,813 sf      | 13% |
| Office:                  | 230,328 sf      | 24% |
| Residential:             | 299,602 sf      | 31% |
| Residential Parking:     | 109,391 sf      | 11% |
| Non-Residential Parking: | 197,868 sf      | 21% |
| Public Amenity:          | <u>1,350 sf</u> | 0%  |
| TOTAL:                   | 965,352 sf      |     |

Per zoning section 4.5.8(c)1, the maximum allowed FAR is 9.5

$109,779 \times 9.5 = 1,042,900.5$  sf **Maximum allowed area.**

The proposed FAR for Adjusted Parcel 2 is:  $965,352 / 109,779 = 8.79$  **PROPOSED FAR.**

Building Height and Setbacks: Maximum building height per zoning section 4.5.8(c)1 is 160'-0". Proposed building heights comply with requirements, see drawing Z-021 Zoning Sections. Setbacks at street level are not required and not provided. Mechanical penthouses encroach beyond height limit no more than 15 feet, as allowed per Zoning Section 5.2.6(b) and are setback 10'-0" from the roof edge.

Pervious Area: Minimum required pervious area per zoning section 4.5.8(c)1 is 10%, or 10,978 square feet. Proposed pervious area to be **11,015** square feet, or **10.03%**. These "green" roofs will be in the North Tower on floors 7 and 12.

#### Floorplate Compliance Checklist

| Floors | Max Allowed |
|--------|-------------|
| 1-5    | 100% of Lot |
| 6-8    | 80% of Lot  |
| 9-12   | 55% of Lot  |
| 13     | 15,000 sf * |
| 14     | 15,000 sf * |

\* Each tower separated by 60'-0"

#### Floorplate Compliance Checklist - Proposed

| Floor | South Tower | Floor  | North Tower          |           | Total Coverage | % Lot Coverage |              |
|-------|-------------|--------|----------------------|-----------|----------------|----------------|--------------|
|       |             |        | East                 | West      |                |                |              |
| 1     | 84,795.60   | Cellar | 23,656.56 (Excluded) |           | 84,795.60      | 77.24%         | < 100%       |
| 2     | 85,488.59   | 1      | 22,954.26            |           | 108,442.85     | 98.78%         | < 100%       |

|       |             | 13     | 10,140.00            | 10,140.00 | 20,280.00      | 18.47%         | < 15,000 ea. |
|       |             | 14     | 10,140.00            | 8,710.00  | 18,850.00      | 17.17%         | < 15,000 ea. |

## 2.4 URBAN DESIGN STANDARDS: Zoning Section 4.5.8(c)2 and Section 6.3.2(a)

Stepbacks are provided within 60'-0" of grade level and by 12<sup>th</sup> floor at all portions of the development, see Drawing Z-021 Zoning Sections. Upper story floorplates are split into reduced plates to provide tower-like proportions to allow views of the sky between individual building elements.

Projecting bay windows, recessed entryways, recessed balconies, spandrel panels, and brick offsets offer multiple surface relief in articulation of the facades of 4" or more at each facade. Primary material choices include brick, limestone-finished panels, and glass. Material changes are provided at upper story setbacks and other façade elements. Accent materials include metal railings and screens.

Setbacks provided are activated as outdoor amenities for tenants and visitors. The tops of the tower-like elements include columned structure with screened mechanical penthouses including all mechanical equipment (except for plumbing and shaft vents) setback from the façade. The columns also serve as support structure for an extensive photovoltaic array, providing power to the development. A 6" stone projection is provided at the roof level of the North Towers.

The lower stories, consisting of retail, parking, and residential uses, are visually differentiated from upper stories through material changes and setbacks. The upper stories are also differentiated with material changes and setbacks.

Multiple pedestrian access points are provided to buildings on all sides of the development and are typically setback 10'-0" from the main façade. The entry setbacks continue to the upper stories to create vertical expression, and are further expressed through canopies and signage.

### **Proposed Exterior Finish Materials**

|                           | Cherry St. | St. Paul St. | Bank St.   | Pine St.   |
|---------------------------|------------|--------------|------------|------------|
| Brick-Faced Panels        | 14,163 29% | 7,731 18%    | 1,978 6%   | 7,749 25%  |
| Limestone Finished Panels | 4,550 9%   | 5,485 13%    | 3,853 11%  | 4,796 15%  |
| Glazing                   | 21,824 45% | 25,410 58%   | 27,418 77% | 14,819 48% |
| Stone Base                | 266 1%     | 281 1%       | 161 1%     | 194 1%     |
| Metal Panels              | 7,755 16%  | 4,801 11%    | 2,083 6%   | 3,398 11%  |
| Total:                    | 48,558     | 43,708       | 35,493     | 30,956     |

For additional compliance information, see Zoning Ordinance Appendix.

## 2.5 RESIDENTIAL: Zoning Section 9.

Proposed residential units at the Cherry Street portion of the development are 242, distributed between floors 2-14. Proposed residential units at the Bank Street portion are 30, distributed between floors 2-4. The total quantity of proposed residential units is 272. Proposed units include 35 Studio apartments, 116 1-Bedroom apartments, and 121 2-Bedroom apartments.

Of the total 272 units, 55 (20.22%) are proposed to be Inclusionary apartments. The Inclusionary units are proportionally distributed amongst unit types and are evenly distributed throughout residential portions of the development. See Drawings A-051 – A-053.

## 2.6 RETAIL: Zoning Section 4.5.8(c)2C

Retail uses are proposed at street-level areas along all four street frontages, as well as second floors at Bank and St. Paul Streets. Approximately 75% of the retail facades consist of glazing to allow for prescribed display and visual requirements. See Elevations A201-A202 for specific percentages at each facade. Glazing allows transparency in order to provide window displays for tenants. Ground floor heights (floor to floor) are typically 15'-6", but vary per retail tenant space and meet or exceed 14'-0".

## 2.7 OFFICE:

Proposed office uses are located at floors 6-12 of the Bank Street (South) tower and at floors 5-6 of the Cherry Street (North) tower. See plan drawings.

## 2.8 PARKING: Zoning Section 4.5.8(c)4, Section 6.2.2(i,l), and Section 8

**The development commits to participate in the Downtown Parking and Transportation Management District.** Parking for tenants and visitors is provided at and above the second floor of the development on floors 2 through 5 of the South Tower. Vehicular parking access is provided on both Cherry and Bank Streets. Pedestrian access to parking area is provided at Cherry, Pine, and St. Paul Streets. Vehicles and headlights within the parking area are screened from public view with building façade elements consistent with the scale and materials of the overall development.

The total required number of automobile parking spaces is 733 (Zoning Section 8.1.8). See Table below. Total proposed number of automobile parking spaces is 761. Total proposed number of accessible parking spaces is 16, and all are provided at the lowest parking level.

An off-street loading area is proposed on Bank Street sharing the driveway with the off-street parking vehicular access.

Electric Vehicle Charging Stations are a component of the proposed parking use. See LEED checklist for more information.

### Car Parking Requirements

| Use                              | Required Base # | Ratio         | Required   | Proposed   |
|----------------------------------|-----------------|---------------|------------|------------|
| General Retail                   |                 | 0             | 0          | 0          |
| Office                           | 230,328 sf      | 2 per 1000 sf | 461        | 489        |
| Residential                      | 272 Units       | 1 per unit    | 272        | 272        |
| <b>Totals</b>                    |                 |               | <b>733</b> | <b>761</b> |
| Required Accessible Parking (2%) |                 |               | 15         | 16         |

Total required and proposed bicycle parking is 171. This is subdivided by 121 long term spaces and 50 (max required per Zoning Section 8.2.5) short term spaces. See table below. The long term spaces are located on floors 2-5 of the parking area, adjacent to the Pine Street parking pedestrian access and includes shower and changing facilities. Short term spaces are located at streetscape, adjacent to major entry points. See LA-200 Layout Plan.

**Bicycle Parking Requirements**

| Use            | Required<br>Base # | Long Term       |        | Short Term      |        |
|----------------|--------------------|-----------------|--------|-----------------|--------|
|                |                    | Ratio           | Spaces | Ratio           | Spaces |
| General Retail | 126,813 sf         | 1 per 20,000 sf | 7      | 1 per 5,000 sf  | 26     |
| Office         | 230,328 sf         | 1 per 5000 sf   | 46     | 1 per 10,000 sf | 23     |
| Residential    | 272 Units          | 1 per 4 units   | 68     | 1 per 10 units  | 27     |
| Sub-Total      |                    | 121             |        | 50 (Max Req'd)  |        |
| Required Total |                    |                 |        | 171             |        |

**2.9 PUBLIC AMENITY:**

A public observation deck is located on the 13<sup>th</sup> floor of the Bank Street (South) tower consisting of an enclosed observation area and an exterior deck. Public access is via the Bank Street Office entry point.

**2.10 SIGNS:** See Zoning Sections 4.5.8(c)5 and Section 7.

Signs shall be submitted for review under a separate permit application. Any signs shown in the drawings or renderings are generic in nature and do not necessarily represent actual signage to be proposed.

**2.11 GREEN BUILDING:** Zoning Section 4.5.8(c)6

This project is required to meet a LEED Gold Standard as part of the zoning changes for the Downtown Core Mixed Use Overlay district that were approved by Burlington voters. The project will pursue certification under the “LEED v4 for New Construction and Major Renovations” rating system.

See FIGURE 2-A for a Summary LEED Checklist per Zoning Section 5.4.8(c)6A. This checklist illustrates the most straightforward path to the 60 points required for certification at the Gold level. It is of a schematic nature at this time and is subject to change based on design adjustments over the course of the project and may take a significantly different path to certification.

FIGURE 2-B is the receipt offered as proof that the project has been registered with the US Green Building Council. The project ID is 1000097092 and the project should be listed at <http://www.usgbc.org/projects> by the time this application is submitted.

The project team hereby commits to pursuing pre-certification at the earliest appropriate milestone. The ability to pre-certify projects registered for the “New Construction and Major Renovations” version of LEED has not been available in the past, but a precertification option applicable to this project was announced on December 1, 2016. The precertification worksheet requires specific details about the project to be provided to the LEED certification body, such as mechanical equipment schedules, plumbing fixture data, and other details which will not be determined until the design has progressed substantially, although the LEED checklist provided with this application indicates the level of performance we intend to pursue. <http://www.usgbc.org/articles/new-precertification-options-launched-leed-v4-bdc-and-om-projects>

We note that the LEED process is rigorous and that our team's experience indicates that for a project of this size and complexity, it generally takes a year following final completion of the project to submit the extensive documentation required for formal review by GBCI, the official certifying body for LEED. While precertification will provide written feedback from the reviewing body early in the design process, we anticipate final certification will occur in the summer of 2021, based on the proposed schedule's final completion in May, 2020,

Freeman French Freeman will coordinate the LEED submission and has successfully facilitated the LEED certification of 10 projects, 5 of them at the Gold level. Among them are the Community Health Centers of Burlington (LEED Certified); UVM University Heights (LEED Gold); UVM Jeffords Hall (LEED Gold). FFF has a further 5 projects with LEED certification pending.

## 2.12 STORMWATER MANAGEMENT: Zoning Section 4.5.8(c)6B

The existing site is composed almost entirely of impervious areas. Runoff from the existing site discharges directly and without treatment or attenuation to the combined sewer system. The runoff from the site is treated at the Burlington Main Municipal Wastewater Treatment plant. Each year, for most storms runoff from the existing site is fully treated at the wastewater treatment plant. However, several times each year during larger storm events, the Main Municipal Wastewater Treatment plant is hydraulically overloaded. Therefore, there are opportunities to implement improved runoff reduction practices for the site in accordance with Section 4.58(c)6B of the Downtown Mixed Use Core Overlay Regulations. The following opportunities are considered:

- Separating stormwater flows from sanitary sewer flows to allow onsite attenuation. Onsite, rainwater will be collected through a system that is separate from the sanitary sewer system. Prior to leaving the site, rainwater will be stored and attenuated in 3 large underground water cisterns. These subsurface tanks will reduce the runoff from the site for all storms when compared to current conditions. The rate of runoff will be reduced so that during a 1-year 24-hour storm the peak stormwater rate flows from the site at a rate less than the peak runoff rate from a meadow in good condition. Smart flow meter technology will be integrated for DPW's use to provide effective flow rates optimized to the main wastewater treatment plants needs across a variety of storms hydrographs.
- Stormwater Reuse through a greywater toilet or irrigation system is not appropriate to implement for this site. This site is a mixed-use development containing retail and residential bathrooms, medical office uses, and daycare facilities where a greywater reuse system is not feasible due to the future flexibility of uses in the building. Also, Vermont's climate does not require the use of irrigation systems.
- Green Roofs will be provided on a minimum of 10% of the proposed building, designed to capture and attenuate the first 1" of rainfall. The location of the green roofs will take into account solar shading of the terraced roof's and structural framing systems.
- Bioretention areas need to be located in topographically flat areas with deep well-draining soil, that receive runoff from areas that are protected from sedimentation. A bioretention area is proposed along a portion of the north side of Bank Street. The bioretention area will be located at the lower end of the street where a parking-bump-out occurs so that the bioretention area

has enough width so that the appropriate vegetation can survive winter conditions and a pretreatment device can be provided.

- All of the sidewalks surrounding the site will have some pervious paver areas, street trees and landscaping that will reduce the runoff of stormwater through infiltration and evapotranspiration.
- The appropriateness of infiltrating stormwater requires the evaluation of subsurface conditions. Prior to implementing stormwater infiltration measures, the following items must be evaluated during construction because a building currently occupies the site: existing soil contamination; structural bearing capacity of saturated soils; water infiltration into basements and subsurface structures including buildings that surround the site; existing and proposed depth to ledge rock; existing and proposed groundwater elevations; and the ability to maintain effective pretreatment facilities where needed.

See Drawings C1.6 and C3.4 for Erosion Prevention Sediment Control Plan, Details and Notes.

#### 2.13 OUTDOOR LIGHTING: Zoning Section 5.5.2

The intent of exterior lighting is to minimize light pollution while providing safe and inviting streetscapes for pedestrians and retail activities. Sidewalk lighting for pedestrians will be wall-mounted downlights mounted at brick piers at either side of the main entries. Additional lighting at main entry points to the development will be by canopy-mounted downlights. See specifications and LA-500 Lighting/ Photometric Plan.

#### 2.14 ADJUSTED PARCEL 2 COVERAGE CALCULATION: (See Proposed Site Plan for more info)

**Proposed:**

|                             |                           |
|-----------------------------|---------------------------|
| Building (Non-Pervious):    | 97,122 sf                 |
| Pavement:                   | <b>1,642</b> sf           |
| Pervious Area (Green Roof): | <b>11,015</b> sf          |
| Total:                      | 109,779 sf                |
| Lot Size:                   | 109,779 sf                |
| Proposed Coverage:          | $109,779/109,779 = 100\%$ |

## 5.0 DEVELOPMENT ANALYSIS

### 5.1 DAYS AND HOURS OF OPERATION:

#### **Days and Hours of Operation**

| Component         | Days        | Hours        | Notes                                        |
|-------------------|-------------|--------------|----------------------------------------------|
| Retail            | 7 days/week | 9am-9pm      | <i>Extended hours during holiday periods</i> |
| Office            | M-F         | 7am-6pm      |                                              |
| Residential       | 7 days/week | 24 hours/day |                                              |
| Parking Structure | 7 days/week | 24 hours/day |                                              |

### 5.2 NUMBER OF EMPLOYEES:

Number of employees is estimated to be 50.

### 5.3 TRAFFIC GENERATION AND PARKING ANALYSIS: See FIGURE 5-A.

### 5.4 PHASING SCHEDULE: See FIGURE 5-B.

### 5.5 NOISE: See FIGURE 5-C.

The proposed project would not result in adverse noise impact as it relates to the Burlington Noise Code (Section 21-13). The project would not be expected to include specific noise generating activities which are prohibited according to the Noise Code.

The development will include retail and office uses similar in nature and character to existing uses on the site and on abutting parcels typical of the downtown. Parking, loading docks, and trash and recycling facilities are partially enclosed within the building which would improve current conditions. The outdoor fifth floor tenant park will only be accessible to office tenants and the pre-kindergarted program during normal business hours. Standard mechanical equipment will be located on the building roofs and would be enclosed which would substantially reduce noise to the community.

### 5.6 ARCHEOLOGICAL IMPACTS:

The development is located entirely within a site previously disturbed during the urban renewal projects that resulted in excavation, disturbance and removal of soils to a depth below anticipated features of archeological significance. Based on this and a review with Planning and Zoning Staff and archeological professionals, it has been determined that the site does not require any further study.

## **6.0 MAJOR IMPACT NARRATIVE** pursuant to Zoning Section 3.5.6(b):

- 6.1 The project will not result in undue water, air or noise pollution. Currently, most or all of the stormwater runoff from the site is discharged untreated to the City of Burlington combined sewer and stormwater collection system which is conveyed to the Main Wastewater Treatment Plant for treatment. The proposed project will manage stormwater runoff via filtering through a green roof (for a portion of the project roof), streetscape stormwater treatment features (such as pervious pavers and vegetated filtration planters) and attenuated storage in below grade stormwater cisterns prior to discharge to the municipal system, thus improving the quality and reducing the rate of stormwater discharge from the project site. Sanitary sewage from the project will be discharged to the municipal system and conveyed to the Main Wastewater Treatment Plant for treatment. Coordination with the Burlington Department of Public Works is ongoing to configure discharge locations around the project based on municipal capacity. Proposed mechanical equipment and additional parking within the project will not result in undue additional air pollution.

Refer to Section 5.5 Development Analysis above and FIGURE 5-C for a summary of anticipated noise pollution.

Refer to FIGURE 6-A for Contractor Dust Mitigation Control Measures.

- 6.2 The anticipated increase in domestic water demand for this project (in addition to existing domestic water demand) is roughly 100,000 gallons per day. Coordination with the Burlington Department of Public Works has indicated that there is sufficient reserved water supply available for this project. In addition, adequate flow and pressure for fire suppression is available.
- 6.3 The project site is bounded by municipal waterlines to the north and south and a new municipal waterline is proposed in the new section of Saint Paul Street to the east. This new line will improve the downtown distribution system connectivity. The proposed project does not unreasonably burden the city's present or future water supply or distribution system.
- 6.4 The existing site is essentially 100% covered with impervious surface (building, concrete and asphalt). The proposed site is similarly covered with impervious surface with the addition of a green roof and pervious pavers around the perimeter of the site. Neither existing nor proposed site conditions will cause unreasonable soil erosion or reduce capacity of the land to hold water. During construction, standard urban erosion control measures will be administered including perimeter silt fencing where appropriate, inlet protection, stone construction entrances, temporary sedimentation basins, filtered dewatering and street sweeping as necessary. In general, the majority of the site will be excavated below surrounding grades by several feet during foundation work and, once grades met, stabilized with crushed stone and eventually concrete. Due to the downtown location, there will be minimal soil stockpiling for extended durations.
- 6.5 The Burlington Town Center project is not expected to generate unreasonable congestion or unsafe conditions within Burlington's transportation system. As demonstrated in the project's Traffic Impact Study, the City of Burlington's existing grid street network, transit facilities, sidewalk

network, and bicycle facilities can adequately accommodate the additional trips generated by the proposed Burlington Town Center project. The project is located in the downtown core of Burlington, surrounded by a dense network of sidewalks and bicycle amenities and directly across the street from the recently completed Green Mountain Transit Downtown Transit Center. The proximity and availability of these amenities will result in a significant number of site-generated trips occurring by non-automobile mode (e.g. by foot, by bicycle, and by bus). A number of the likely Town Center tenants are active participants in the Chittenden Area Transportation Management Association (CATMA), an organization that partners with employers and employees to reduce single occupant vehicle trips. The density and mix of uses proposed for the project will likely result in a number of trips occurring entirely within the Town Center (e.g. apartment to daycare or office to restaurant), and thus not impacting the adjacent street network. An important aspect of the project is the proposed construction of Pine Street and St. Paul Street between Bank Street and Cherry Street to restore the City's street grid in this area. In addition to improving overall downtown connectivity, the new blocks of Pine Street and St. Paul Street will enhance bus accessibility from the Downtown Transit Center and create new routes for existing cross-town trips, thereby reducing overall delay on parallel north-south streets including Battery Street and South Winooski Avenue. New traffic signals are proposed at the Pine Street/Cherry Street, Pine Street/Bank Street, and St. Paul Street/Cherry Street (integrated with Downtown Transit signals) which will accommodate both site-generated trips, newly re-routed cross-town trips, and buses departing from the Downtown Transit Center.

- 6.6 The Burlington School District 2015 Annual Report listed total enrollment of 3,975. A letter from the Burlington School Department dated February 5, 2004 regarding proposed housing at the nearby Battery and Cherry Street developments estimated 0.127 school age students per 2-bedroom unit based on a 1990 Cannon Associates report. A 2007 report from VHFA titled Housing and Vermont School Enrollment estimated 0.13 school aged children per "attached" 2-bedroom unit and 0.18 school aged children per 2-bedroom unit in buildings with 2-4 units. Based on these documents, a value of 0.15 school aged children per 2-bedroom unit is assumed for this development. There are 272 units of housing proposed for this development with a mix of 35 studios, 116 1-bedroom and 121 2-bedroom units. Assuming no school age children in the studios and 1-bedroom units, an estimated number of school age children in this development is 18.15. This represents less than ½% of the current enrollment and should not cause an unreasonable burden on the city's ability to provide educational services.
- 6.7 Not place an unreasonable burden on the city's ability to provide municipal services; A technical review meeting was convened with municipal departments on January 14, 2016 to review the project and the city's ability to provide municipal services. Based on input at the meeting there was not indicated that the project would place an unreasonable burden on the city's ability to provide municipal services. Coordination with municipal departments has been ongoing to address technical review comments. Ability to service letters will be requested from municipal departments as necessary.
- 6.8 The project will not have an undue adverse effect on the features noted above. There are no irreplaceable or significant natural areas located on the project site. The existing structures proposed to be demolished for the project were constructed during the period of urban renewal and are all less than 50 years old and no considered historic. As noted in Section 5.6 Archeological

Impacts above, the site was previously disturbed during the urban renewal redevelopment and no significant archeological features are anticipated to have survived. The project will be visible from locations throughout the city, however the size, massing and materials will meet the Downtown Mixed Use Core Overlay regulations and not have an undue adverse effect on the scenic or natural beauty of the area or any part of the city.

- 6.9 The project will not have an undue adverse effect on the city's growth, fiscal capability or public services and facilities. The project meets many of the initiatives identified in planBTV and the city municipal development plan in support of appropriate growth in the city and increased tax base revenue to support public services and facilities.
- 6.10 The project is in substantial conformance with the city's Municipal Development Plan adopted March 31, 2014, planBTV Downtown and Waterfront plan adopted June 10, 2013, the Housing Action Plan, the Great Streets Initiative, the Climate Action Plan and the Legacy Action Plan and the 2013 College Street StormwaterShed Retrofits Green Infrastructure Plan. Specific goals of the of the 2014 Municipal Development Plan supported by this project include; Strengthen the City Center District (CCD) with higher density, mixed-use development as part of the regional core while ensuring that it serves the needs of city residents, particularly those in adjacent neighborhoods. Target new and higher density development into the Downtown, Downtown Waterfront, Enterprise District, Institutional Core Campuses, and the Neighborhood Activity Centers. Enhance the City's gateways and streetscapes. Enhance the pedestrian experience by improving opportunities for pedestrian access and interaction throughout the city. Promote and strengthen a mixed economy, and work actively to retain existing businesses and jobs. Invest in the necessary public improvements, particularly transportation, to strengthen the Downtown, both as a Regional Growth Center, and as city neighborhood. Encourage a healthier regional balance of affordable housing in each community, proximate to jobs and affording mobility and choice to low income residents. Support the development of additional housing opportunities within the city, with concentrations of higher density housing within neighborhood activity centers, the downtown and institutional core campuses.
- 6.11 A major component of the Burlington City Center project is to provide a significant number of new housing units. The project as currently planned contains a total of 272 units. There are 121 2-Bedroom apartments, 116 1-Bedroom apartments, and 35 studio apartments out of which 55 units (24 2BRs, 24 1BRs, & 7 studios) will be permanently affordable. In October 2016, the Allen & Brooks Northwest Vermont Market Report showed a 2.1% rental vacancy rate in Chittenden County, well below the national average of 4.4%. While the project will add both retail and office jobs, that increase will be incremental when compared to jobs at the existing mall use on this site. The 272 units will likely house upwards of 500 people, and mark a significant increase in the population and availability of housing in our downtown core. There is a particularly high demand for housing within the City of Burlington, and PlanBTV notes that downtown housing is in particularly short supply (p60) and has impacted the ability of local business to attract an educated workforce. The PlanBTV report cites the mall site as one of two "ideal locations" for new downtown housing (p62). In focusing on the mall, the report states, "With underdeveloped air space above the mall, and a relatively high and flat area of the City that has little impact on prominent views, this quadrant of downtown is well suited for larger residential structures" (p108). In short, a primary goal of this project is to provide housing in a location that has been

identified by citizens and planners as having a high demand for housing and a high potential for redevelopment.

- 6.12 The project helps to fulfill several goals of Burlington's Plan BTV Downtown and Waterfront Document that are outlined on By facilitating the re-opening of portions of St. Paul and Pine Streets that were subsumed into the urban renewal "superblock", the project facilitates movement through downtown, removing barriers to north-south travel, and providing new "complete streets" that include wide sidewalks, street trees, and street furniture, and support for multiple modes of transportation while focusing on a pedestrian experience. The project will help enliven the area just north of City Hall Park and improve the experience of Cherry Street. By enhancing the street life in the area around the mall, the project will enhance the connection between Church Street and Waterfront Park. The project will also include a rooftop observatory, green roof spaces, and street-level outdoor spaces that could provide additional space for popular events such as the Discover Jazz Festival. A day care facility planned for the site will help meet a clear need for childcare. The increased density of the project will bring more residents and office workers to downtown areas that are well served by existing parks facilities- but at the same time, the project will give back street space to the public and enhance the aesthetics and experience of existing streets. Please also refer to FIGURE 6-A letter of support from the Department of Parks and Recreation, and Waterfront.

## **7.0 MAJOR IMPACT REVIEW INTERDEPARTMENTAL CHECKLIST**

Request for impact review letters will be sent to each department below:

- Department of Public Works for written input on municipal water and sewer needs, stormwater management, erosion control, and traffic impacts.
- Department of Parks and Recreation for written input on park and recreation needs.
- School Department for written input on educational impacts.
- Fire Department for written input on anticipated fire and emergency response impacts.
- Police Department for written input on anticipated police service impact.

December 7, 2016

Burlington Schools  
150 Colchester Avenue  
Burlington, VT 05401  
Att: Yaw Obeng  
Superintendent of Schools  
[superintendent@bsdvt.org](mailto:superintendent@bsdvt.org)

Dear Mr. Obeng:

A multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District is proposed by Devonwood Investors, LLC. The purpose of this project is to redevelop the project site presently occupied by Burlington Town Center Mall. The proposed uses include retail, residential, office, and parking with a total proposed square footage of 949,506. In addition, two of the reconfigured parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets. We have included the following Plans for your reference: Existing Conditions C1.0, Demolition Plan C1.1; and Site Plan C1.2.

The applicant is in the process of applying to the City of Burlington for a Planning and Zoning Permit. We are writing to introduce you to the project and review aspects of the project related to educational services. In accordance with section 3.5.6(b)6 of the zoning ordinance, we would like to have you determine that the project, "Not cause an unreasonable burden on the city's ability to provide educational services".

To help you with evaluating this statement we have compiled the following data. The Burlington School District 2015 Annual Report listed total enrollment of 3,975. A letter from the Burlington School Department dated February 5, 2004 regarding proposed housing at the nearby Battery and Cherry Street developments estimated 0.127 school age students per 2-bedroom unit based on a 1990 Cannon Associates report. A 2007 report from VHFA titled Housing and Vermont School Enrollment estimated 0.13 school aged children per "attached" 2-bedroom unit and 0.18 school aged children per 2-bedroom unit in buildings with 2-4 units.

Based on these documents, a value of 0.15 school aged children per 2-bedroom unit is assumed for this development. There are 272 units of housing proposed for this development with a mix of 35 studios, 116 1-bedroom and 121 2-bedroom units. Assuming no school age children in the studios and 1-bedroom units, an estimated number of school age children in this development is 18.15. These 18 children would represent less than one-half of one-percent (0.5%) of the current enrollment and should not cause an unreasonable burden on the city's ability to provide educational services.

If you have any questions or need additional information, please let us know.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Kevin Worden', is written over a horizontal line.

Kevin Worden, P.E.  
Vice President

December 7, 2016

City of Burlington  
Department of Public Works  
645 Pine Street Suite A  
PO Box 849  
Burlington, VT 05402-0849  
Att: Chapin Spencer  
Director of Public Works  
[cspencer@burlingtonvt.gov](mailto:cspencer@burlingtonvt.gov)

Dear Mr. Spencer:

Thanks for your and your department's previous input on the multi-use project proposed by Devonwood Investors, LLC within the Downtown Mixed Use Core Overlay (DMUC) District. As you know, the purpose of this project is to redevelop the project site presently occupied by Burlington Town Center Mall. The proposed uses include retail, residential, office, and parking with a total proposed square footage of 949,506. In addition, two of the reconfigured parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets. We have included the following Plans for your reference: Existing Conditions C1.0, Demolition Plan C1.1; and Site Plan C1.2

A technical review meeting was convened with municipal departments on January 14, 2016 to review the project and the city's ability to provide municipal services. Based on input at the meeting there was no indication that the project would place an unreasonable burden on the city's ability to provide municipal services. Coordination with municipal departments has been ongoing to address technical review comments.

To summarize the projects estimated demands, there will be an anticipated increase in domestic water demand (in addition to existing domestic water demand) around 100,000 gallons per day. Our previous coordination with the Burlington Department of Public Works has indicated that there is sufficient reserved water supply available for this project.

The project site is bounded by municipal waterlines to the north and south and a new municipal waterline is proposed in the new section of Saint Paul Street to the east. This new line will improve the downtown distribution system connectivity. As the project moves forward, Site Development and Construction Plans will be finalized to provide final construction level details as is necessary.

At this time, to address the initial criteria of a Zoning Permit accordance with section 3.5.6(b) we would like to have you determine that the project:

- Has sufficient water available for its needs

- Not unreasonably burden the city's present or future water supply or distribution system
- Not cause unreasonable congestion or unsafe conditions on highways, streets, waterways, railways, bikeways, pedestrian pathways or other means of transportation, existing or proposed
- Not place an unreasonable burden on the city's ability to provide municipal services, as related to the services that the Department of Public Works provides.

If you have any questions, please call our office.

Sincerely,

Kevin Worden, P.E.  
Vice President

December 7, 2016

Burlington Fire Department  
Office of the City Fire Marshal  
132 North Avenue  
Burlington, VT 05401

Att: Barry J. Simays  
Burlington Fire Marshal  
[bsimays@burlingtonvt.gov](mailto:bsimays@burlingtonvt.gov)

Dear Barry:

A multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District is proposed by Devonwood Investors, LLC. The purpose of this project is to redevelop the project site presently occupied by Burlington Town Center Mall. The proposed uses include retail, residential, office, and parking with a total proposed square footage of 949,506. In addition, two of the reconfigured parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets. We have included the following Plans for your reference: Existing Conditions C1.0, Demolition Plan C1.1; and Site Plan C1.2

The applicant is in the process of applying to the City of Burlington for a Planning and Zoning Permit. The project will be designed to meet the requirements of the appropriate Vermont Building Codes, including relevant NFPA Codes, to provide adequate fire protection and emergency medical services to the property. As the Authority Having Jurisdiction, building plans will be submitted to your office for review of all proposed building construction during the Building Permit process.

At this time, to address the initial criteria of a Zoning Permit, we are writing to introduce you to the project, review site and zoning related aspects of the project, and incorporate your input in to the Zoning Permit plans. In accordance with section 3.5.6(b)7 of the zoning ordinance, we would like to have you determine that the project, "Not place an unreasonable burden on the city's ability to provide municipal services" as related to fire and emergency medical services.

Please give me a call at your convenience and we would be happy to meet with you to orient you to the proposed project and receive your feedback.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Kevin Worden', is written over a light blue horizontal line.

City of Burlington  
Department of Parks and Recreation  
645 Pine Street Suite 8  
Burlington, VT 05401  
Att: Jesse Bridges  
Director of Parks and Recreation  
[jbridges@burlingtonvt.gov](mailto:jbridges@burlingtonvt.gov)

Dear Jesse:

A multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District is proposed by Devonwood Investors, LLC. The purpose of this project is to redevelop the project site presently occupied by Burlington Town Center Mall. The proposed uses include retail, residential, office, and parking with a total proposed square footage of 949,506. In addition, two of the reconfigured parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets. We have included the following Plans for your reference: Existing Conditions C1.0, Demolition Plan C1.1; and Site Plan C1.2.

The applicant is in the process of applying to the City of Burlington for a Planning and Zoning Permit. We are writing to introduce you to the project and review aspects of the project related to park and recreational facilities. In accordance with section 3.5.6(b)(12) of the zoning ordinance, we would like to have you determine that the project will, "not have an undue adverse impact on the present or projected park and recreation needs of the city." The proposed location of the project is within the proximity of several existing park and recreational facilities.

If you have any questions or would like further information about the project, please let us know.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Kevin Worden', is written over a light blue horizontal line.

December 7, 2016

Burlington Police Department  
One North Avenue  
Burlington, VT 05401  
Att: Brandon del Pozo  
Chief of Police  
[bdelpozo@bpdvt.org](mailto:bdelpozo@bpdvt.org)

Dear Chief del Pozo:

A multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District is proposed by Devonwood Investors, LLC. The purpose of this project is to redevelop the project site presently occupied by Burlington Town Center Mall. The proposed uses include retail, residential, office, and parking with a total proposed square footage of 949,506. In addition, two of the reconfigured parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets. We have included the following Plans for your reference: Existing Conditions C1.0, Demolition Plan C1.1; and Site Plan C1.2.

The applicant is in the process of applying to the City of Burlington for a Planning and Zoning Permit. We are writing to introduce you to the project and review aspects of the project related to Police services. In accordance with section 3.5.6(7) of the zoning ordinance, we would like to have you determine that the project, "not place an unreasonable burden on the city's ability to provide municipal services" as related to police services.

The intent of exterior lighting is to minimize light pollution while providing safe and inviting streetscapes for pedestrians and retail activities. Sidewalk lighting for pedestrians will be wall-mounted downlights mounted at brick piers. Lighting at main entry points to the development will be by canopy-mounted downlights

Please let us know if you have any questions or need additional information about the site as it relates to police services.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Kevin Worden', with a stylized flourish at the end.

Burlington Electric Department  
Attn: Neale Lunderville  
585 Pine Street  
Burlington, VT 05401

Dear Mr. Lunderville:

A multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District is proposed by Devonwood Investors, LLC. The purpose of this project is to redevelop the project site presently occupied by Burlington Town Center Mall. The proposed uses include retail, residential, office, and parking with a total proposed square footage of 949,506. In addition, two of the reconfigured parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets. We have included the following Plans for your reference: Existing Conditions C1.0, Demolition Plan C1.1; and Site Plan C1.2

The applicant is in the process of applying to the City of Burlington for a Planning and Zoning Permit. At this time, to address the initial criteria of a Zoning Permit, we are writing to introduce you to the project, review site and zoning related aspects of the project, and incorporate your input in to the Zoning Permit plans.

In accordance with section 3.5.6(b)9 of the zoning ordinance, we would like to have you determine that you have the ability to serve the project and that it does "not have an undue adverse effect on the city's investment in public services and facilities," as related to your electrical facilities.

I have attached the 12/13/2016 Electrical Load Prediction Summary, prepared by William E Neuburger, PE, Director of Engineering, Hallam-ICS indicating the Electrical Load at 2 MVA.

If you have any questions or would like further information about the project, please let us know.

Sincerely,

Re: Burlington Town Center

Greetings John:

Attached are the electric and gas load projections we have provided for the above captioned project.

The predictions strike a balance between code required values for planning and an expectation the project building will be high performance.

The details are shown in the proceeding pages. In summary, the electric demand prediction is 1,985 kVA and the gas demand prediction is 20.8 million btu/hour.

Feel free to contact me directly with questions.

Yours,

William Neuburger  
Director of Engineering

Wards 4 and 7 NPA Meeting  
Wednesday, June 22, 2016  
Draft

Robert E. Miller Community Center  
130 Gosse Court, Burlington, VT

Meeting Start: 7:00pm

Steering Committee members: Michael McGarghan, Matt Cropp, Linda Deliduka,  
Martha Molpus

### **Welcome & Introductions**

Facilitator: Michael McGarghan

Chris Trombly, Ward 7 resident, was nominated for the Steering Committee. Out of 26 Ward 7 residents, 25 voted Yes, with Mr. Trombly abstaining.

Sandi Omanovic, Ward 7 resident, was nominated for the Steering Committee. Out of 26 Ward 7 residents, 25 voted Yes, with Mr. Omanovic abstaining.

### **Open Forum**

The Rivers Edge' gate is currently kept locked; there is a proposal to open the gate to create an emergency exit. The resident voiced support for keeping the gate closed, due to safety, cost of maintenance, and concern about excess traffic.

Coalition for a Livable City advocates that the proposed mall redevelopment height goes against community benefit and PlanBTV vision.

Resident voiced a concern about the Burlington College development compromising one of the most prominent natural open spaces in City limits.

The bike lane pilot project is slated to begin Thursday, June 23, and is on schedule to be completed by Monday, June 27, pending weather.

### **Presentation by Don Sinex, Mall Developer**

Mr. Sinex's first thought upon reviewing the site was how it could be improved to better serve the purposes of living and working downtown in a present-day economy. He met with Mayor Weinberger and was informed of PlanBTV. His design integrated the plan, and his team is committed to environmentally sound development to increase vibrancy and investment. This will increase the walkability of downtown, and the ability to live and work in Burlington. The current design is not relevant; essentially an outdated suburban mall concept in the core of a downtown. The project will bring 900 construction jobs during development, and 1,200 permanent jobs in diversified sectors. The project is still in the design and public input process, and is receptive to feedback; the project has already been changed in design many times in response to constructive public input.

### **Burlington Police Department – Lt. Michael D. Warren**

Lt. Warren has been in law enforcement for 18 years. His primary area of responsibility is the New North End. Some of the concerns heard from residents include vandalism using BB guns and bricks to break windows. Although these are low-level offenses from a criminality perspective, they are important to the department, and resources are being allocated. Neighborhood coordination is encouraged to deter and respond to vandalism and related offenses; email list serves and Front Porch Forum are avenues for this.

### **CCTA – David Armstrong**

GMTA merge will be rural and add more routes, including 15 minute service from Cherry at no additional cost to the city. Transit station will open in August or September, and will have public bathroom.

Automatic vehicle location, so patrons can know when a bus is coming, will be available in a mobile app. Additionally, mobile app will be used for ticketing, to provide an alternative to cash or a paper ticket. In response to a public question, adding debit card functionality to the fare boxes would be a retrofit upgrade costing approximately one million dollars; the mobile app option will be more cost-effective.

Currently in the process of a redesign to look at systems changes across the area to be more efficient and effective, including the Bridge Program which uses data to inform the department about how patrons are using the system.

### **Elected and Appointed Officials**

Councilor Kurt Wright – Charter change in March. We are the only City that uses Party designation in local municipal races. This will be put on the ballot.

Looking at residency requirement update, requiring department heads to live in Burlington. If a hardship exemption exists, they would have one year to move into city.

Councilor Tom Ayers-Pilot project to be implemented beginning Thursday the 23<sup>rd</sup> and finishing by Monday the 27<sup>th</sup>. A City Council meeting on October 17<sup>th</sup> will address whether to keep the change or move back to the current configuration. Public input is accepted in all forms, and a survey will come in August or September.

Anne Judson, School Board Commissioner – We're focused on the needs of safety and education, not wants. Champlain school is overcrowded. Bond may come in the fall, but working with City on where to save money and share cost. Looking to cut 1.2 million.

Meeting adjourned at 9:03pm.

Note Taker: Phet Keomanyvanh, CEDO

Location: UVM Medical Center, McClure Lobby Conference Room  
Date: August 10, 2016  
Time: 7.00 p.m.  
Draft

Agenda:

7.00 p.m.: Welcome and Introductions

7.05: City Council Update: Adam Roof, Sharon Bushor, Selene Colburn: This will certainly include updates on Burlington Town Center, with a City Council Meeting due August 15th to discuss proposed Zoning Changes.

7.30: Speak Out

7.40: Burlington Schools update from Board Chairman Mark Porter

7.50: New UVM Rescue Building on East Avenue: Lisa Kingsbury of UVM to discuss.

8.00: Fletcher Place development project: Frank Von Turkovich has been bringing plans to the NPA and immediate neighborhood for four years or more now. He joins us again with modified proposals.

8.45: Close

Parking: In the McClure Garage, free, courtesy of UVM MC.

Draft Minutes

Start: 7:05

Steering Committee member present: Emily Lee, Richard Hillyard

Agenda:

**7pm Welcome and Introductions:**

See attendance list

**City Council Updates: Adam Roof, Sharon Bushor, Selene Colburn**

Adam Roof-Burlington Town Center dates moving forward to the full City Council. Meeting dates are 15<sup>th</sup> at 6pm Special Work Session, 18<sup>th</sup>, 22<sup>th</sup>, 24<sup>th</sup>. Meeting times can be found on the City's Government Calendar <https://www.burlingtonvt.gov/Calendar> . 3-D model of the Town Center project will be displayed at Fletcher Free model.

Selene Colburn-Community Development and Revitalization committee; have been meeting to discuss housing policy and troubleshooting about homelessness. This has brought up conversation about encampment and solutions such as tiny houses. Still exploring solutions. The Committee will be sponsoring a forum to look at micro-housing and broadly how it will play in housing action plan. Will be inviting CODE in September or October to look at new practices in inspection to know what is expected in compliance. Also will expect report on inclusionary zoning and looking at neighborhood revitalization in housing stock of historical housing that have been used in student and turning over to original usage.

Sharon Bushor- Ordinance Committee; looking at Town Center there are two parts which is the overlay ordinance and the project itself. The 3-D model only shows foot print of project but not the ordinance overlay. The model is to scale. When you go it will be labelled and will address the height of 160feet.

Schedule 6 meetings for the Ordinance committee. The Committee was given an ordinance that had edits that would defined agreements from the Planning Commission. The committee went through the ordinance line by line looking at controversy and non-controversy matters. Changes proposed are that the size is too big and should be scaled back. Eliminating Macy's and 2 parking structures won't impact project but change the ordinance overlay zone.

**Speak out:**

-Planning Commission recommend that the energy guidelines of the building reach gold and that the developer be bonded to reach a LEED Standard of Gold. The developer agrees to have equivalent but not reach gold. The Planning Commission is asking for high quality energy efficient building and the developer meets this. This tool is in the language in the ordinance. Planning Commission finished, sent to ordinance and now it's on to full council. Next big project for the commission is former Burlington College and working to have this parcel developed.

-Feel that this project was pushed through too fast and meetings are jammed together and model is too small which doesn't show the whole overlay. Troubling that storm water is lined up and not in the promise.

-Need to get additional affordable housing. Don't set a standard but give developer incentives to do things for the community. Concerned about terrible landlords that are horrible to their tenants. This may be cause for some state statue.

-SD Ireland leasing apartment on Sept. 1. Posting weekly developments of their projects.

**Burlington School District: Mark Porter, Chair**

BSD has a Capital Plan. Last improvement work done was on Edmunds Elementary. The district had a study done on capital needs. Goals are to take care of ADA and Space which will help improve quality of education and tax payer investment. At BHS connecting doors to auditorium freezes in the winter and the phone system is really old and outdated. If you call 911 then they wouldn't know where you are. Other issues of aspects are elevator repair, windows. With space looking at projections of repair over 10yr to be \$65,320,854. Really, total improvement work would be 100million. In moving forward, the District will bring in public participating include New American communities and provide translators. Tax % change in income 5.53. Voting cycle is November and will move fast on this. Mark will come back in September for Wards 1 and NPA 8 to give an update.

For further details about capital improvement look on BSD website.

### **New UVM Rescue Building- Lisa Kingbury, Lani Raven**

The UVM Rescue project was approved by Development Review Board (DRB) on Monday. There is requirement to bring any major impact project to the NPAs but this is not a major project. This development is located on 284 East Ave at the South End of East Ave. UVM Rescue is primary for UVM. It's been pretty cramp quarters and one ambulance needs to stay outside and ambulances have equipment that need to stay warm to function timely and effectively. The development will have room to house both ambulances. The area will be improved and not increase scope of activity or parking.

Another development project on UVM campus is to the Bailey Howe Library. This development has already going to DRB and will connect first year housing project to the library. The bridge is creating new entrance to the library which needs space for lobby and foyer. Also will have indoor bicycle structure. Bridge will have weather protection and be conditioned. The campus master planning is to build connections between building so students can get around and stay out of the elements.

### **Fletcher Place development-Frank Von Turkovich**

Project on Colchester Ave. Fletcher project would supply affordable and needed housing for Medical workforce community. Two buildings connected by a small connector and will have medical offices and practice. Underground parking, surface parking, bike parking. Lower entrance goes to sidewalk will allow residents to have convenience to medical practice. In the lobby there will be elevator that go to studios. Will not demolish existing structures that are already there. This new development will be set behind the existing building. Current plan tonight shows 73 but may reduce in units. Still need to develop technical issues and not sure when going to be ready to go in front of DRB. Excavated soil may be use on the site which City and State encourage but a lot of it will be taken away. Geo test of soil will be available to first City and State then can be available to private entities. Building design is contemporary. Not looking for this to be student housing but to house work-force development for medical staff. The plan will be one bedroom and studio units. Studios will be \$1400-1500 month. There will be a number of affordable housing units which is required under exclusionary zoning. One bed room units will be 500square feet. Not settled on the floor plan and looking at a few designs.

Close: 9:20pm

DRAFT     DRAFT     DRAFT     DRAFT

Meeting of NPA 6, Aiken Hall, Champlain College, Sept. 1, 2016

Approximately 26 people in attendance plus speakers and NPA steering committee.  
Steering Committee member present: Clare Wool and Charles Simpson.

Minutes:

1. Meeting began at 7:04; Clare Wool presented the agenda for approval.
2. Stephanie Seguino and Miriam Stoll from the School Board gave an up-date.  
Summer construction on various buildings, including Edmunds School, is complete. Burlington High School is poised for positive change. Partnership for Change members have had their program, Architecture for Equity, funded for the coming year. The district audit of facilities last year and determined that \$65 million is needed to correct problems, including deferred maintenance. The Board will be considering two options. 1) Address and correct all deferred maintenance problems but not build a new high school. 2) Do K-12 repairs and analyze the need for a new high school over this school year. Moving ahead with repairs will require asking voters to approve a \$19 million bond issue. This translates into an additional tax burden for the average home owner of \$91 per month. The bonding vote could come in November or March. After fact-finding, contract negotiations with the teachers' union will resume on 9/12. Question (Q): Does the state participate in such expenses? Answer (A) No. School repair issues are a national problem estimated at \$4 billion; this isn't due to our neglect here. Q. For how long is the bond? A. 10 years. Q. Will it result in improvements such as energy efficiency or just a return us to the status quo? A. We don't want just a patch-up. \$10 million goes to put our schools in compliance with ADA. Q. Will you give equal weight to rehab as well as a new high school building? A. The size of the HS is adequate, so yes, though ADA compliance is an issue. Keeping the present building is not off the table.
3. Sandy Yusen and a Champlain College Student Government rep., Gerard --?, spoke. CC Student Government will have a rep. at NPA 6 this year as part of their community outreach effort. A new Women and Gender Studies Center has opened on campus. A faculty art exhibition has opened in the college gallery. Yusen thanked the community for bearing with the college during "move-in weekend". This year they welcomed the largest college class yet and CC will be housing some upper class students in three off-campus facilities, 287 College St.; Bayberry Place, and Spinner Place, Winooski. There will be staff in each location. Eagles Landing is scheduled to be open to students in the fall of 2018. The last campus building project in the master plan, Information Technology Science, is in the planning stage. ITS programs will include cyber security. Some landscape construction is being completed. As a safety and diversity move, the college is painting the crosswalk at So. Willard near Maple in a rainbow pattern. Enhanced crosswalk visibility is being studied for So. Willard crossings. Q. Students are hard to see until they are in the street. A. We are looking into a blinker system. We know we need additional lighting there. Q. We need lighting that covers the middle of the street, not so much a blinker. A. We are looking into this. There will be a raised portion of the crosswalk. Q. Who pays for it? A. The city, we

expect. This is an open conversation. Q. Why the delay at Eagles Landing? A. We are still negotiating with the City for the Brown's Court property. Q. What are your student numbers? A. 2100 now, which is generally even with figures for the past five years. Others students are abroad. Of the 2100, 632 are first-year students. Check for our welcoming event information on the table.

4. Gail Shampnois and Joe Speidel represented UVM. New construction underway will add 300 beds to the previous number on campus. These dorms will open in Fall 2017. The STEM building will open later. The new class has higher than pervious GPA and SAT scores. More Vermont high school grads are attending with free tuition than perviously. We are working with our city counselors, the police dept., and code enforcement to address problem incidents off campus. We are funding police officers to be in the neighborhoods on weekends, including on So. Prospect. We will be mapping incidents so as to take pro-active initiatives. The trends in this area are positive. Thanks for bearing with us during move-in. We are informing all students about the behavior that is expected of them in the community, and will be distributing 500 information and treat bags Sept. 10. We've worked with Councilor Karen Paul on this effort to raise awareness. Call Gail's office with any problems you experience in this regard. We also are running late night student shuttles. (Karen Paul): noise complaints have fallen sharply, sometimes being resolved in 24 hours with the help of the code enforcement officer. Q. Don't you have space to build dorms on the Trinity Campus? A. Yes. We are looking at that. That might need a zoning change "down the line". Q. I want to report that the Wellness Campus is effective. A. Yes, it now is oversubscribed.
5. Ann Taylor, Don Sinex, and Jesse Beck, President of Freeman French Freeman, Inc., presented information on the proposed Burlington Town Center. Taylor said Burlington is a great place to live and the project won't injure it. Business supports it. Sinex said he purchased the property 3 years ago and for the past 2 years has worked with the mayor, Council, Planning and Zoning, and the Planning Commission to refine the plan. BTC is 40 year old and sits on 5 acres or 215,000 sq. feet of land. Physical retail is in a state of flux currently and each year appears to be declining, hence the problems cited by Macy's Corp closing some stores. If they close here, you'll know as soon as I will. I hope not. The site is perfect for mixed use, stacked vertically. This cuts down on auto trips. Our two years of work has gotten us a good design. (At this point he showed slides of the site and the proposed buildings.) These will be true public streets with access to all vehicles, including fire trucks, and pedestrians and bikes. Slopes won't be over 4.5 degrees and so ADA compliant. They aren't perfect. There is a 20 foot drop between Cherry and Bank Streets and 20 feet between Church and Pine. The project will revitalize the downtown, according to an economic impact study done for us by a UVM professor, generating 900 temporary and 1200 permanent jobs. There will be \$200 million of additional economic activity surrounding the mall, including rebuilding on Bank Street. Now there is no storm water management at all. We will improve this, catching, storing, and slowly releasing water to reduce impact on the city's systems. We are working with DPW on this, and storage will be on the 5th floor. Both the streets and the observation deck will be public amenities. There is a problem. We can get clearance of 13'6" for each street with the exception of the ramp under the Free Press Building,

which is 12'. Our largest fire truck is 12' If we were to increase the slope to lower the ramp, we'd increase the incline and create problems as the road meets the Macy's entrance. They'd need steps. So Macy's isn't pleased. But the roads will be 60' wide. Yes, they won't be perfect in that they won't align with the streets they connect with. We can't move the Free Press building. And the NBT Bank building is also in the way. We still aren't done with our planning process and need to meet with DRB and the Conservation Board. They wanted us to make the garage disappear. It is self-ventilating and 50% open, using screens with holes. From the sidewalk, you can't see through the screens but you could face-on. From the street you won't see car lights or cars. The buildings are well-designed with setbacks so the pedestrian experience from the street is such that you won't feel the height. A bird will see it, but not a pedestrian. Our goal is for the pedestrian to feel the street vitality, not the height. We think we have the right balance. 50,000 feet of the plot are streets, deeded to the city. Yes, we can ask to close them for events, just as any city street could be closed through the proper procedure for a proper purpose. This is a large space for community functions, an outdoor plaza. Parking: We wanted underground but the cost is \$75 million not the \$25 million we'll pay for above-ground parking. We can't pay for it. It requires a 45 foot hole over 125,000 sq. ft., and excavation would take 9 months and many trucks coming and going. Downtown soil is often contaminated so disposal could add \$100 a cubic yard for 200,000 yards. It's impossible. Height? You won't feel it. Inclusionary Zoning? We have full IZ compliance that will never go away, set at 60% of median income. Shops, "most of the shops" will be entered from the street. We may need a clinic, a pet shop, a pre-school; it is hard to say at this point. TIF's? I'm giving up property. I can't build the roads. If the public wants them, they should pay. I've been told that Farrell's project has the developer building the streets. But he's getting \$2 million from the city (for the park) and money is fungible. He'll use that to build the streets. So its the same. TIF's don't impact your tax bill. We use 75% of the increased tax generated to pay the bond, but 25% goes to the city. "This is my money, not the city's." It doesn't impact your tax bill. Without the project there's no increase so you can't say you could use the money for some other expense. You'll get to vote on the TIF. The public gets the streets. (Jesse Beck): We are also doing the new City Market and we did the garages at the airport and the hospital. The 160ft. height is only on half of the plot. Downtown is ready for this. We have setbacks after the 5th story. Q. Don't you have a wall on Cherry Street unlike the setbacks on Church Street? A. Setbacks vary with the city requirements. They are 60ft. on Church Street after 45 ft. The 45ft height gives Church St. a potential uniform wall on the west side. Planning and Zoning wanted this increase to 45 foot height to make it even. Q. Won't there be shading on the Cherry Street park? Can't you space out the towers more to minimize that? A. We are looking at that. New streets will also add street level sun. Check the CEDO website for particulars on setbacks. Q. Can you lower the height? The square feet on the top of the towers is only 8000 ft each or a total of 24,000 sq. ft. With 325,000 sq. ft. for the garage, putting it underground would let you lower the towers. It is hard to see that all 200,000 cubic yards of soil would be contaminated. Say half was. That would make removal and disposal cost \$60 million more for a project with underground parking. A. (Beck) At BTV the cost for above ground parking was 10,000-15,000 a space; at the hospital it was 42,000 a space.

(Sinex): \$21,000 above ground and \$55,000 below at present. We initially wanted it underground but the project can't sustain it financially. We wouldn't get the financing. Each garage floor is 10 ft. Q. Can't you reduce the number of parking spaces, put parking where the concourse presently is, sell some spaces, use shared space as per the downtown parking plan, and then you'd have 325,000 more square feet of space to rent. A. We looked at all those options. We can't get it to work. Our garage is as small as possible given the demand of our mix. Retail wants spaces We can't reduce the number of spaces without reducing the size of the project. Our UVM Medical tenants have 500 employees and want 500 spaces. We are trying to shift some of this to adjacent lots. Apartments want one space each. Then there's additional office space, then retail. Yes, we need smart parking management. Champlain College students won't be allowed to park downtown so that saves 80 spaces. We've studied this. You have peak demand at 1200 spaces and you have 925 slots. Valet parking can gain you 225 spaces. You build to 85% of the peak demand so you don't have unused spaces most of the year. We are stuck. Q. If you presume the soil is contaminated, won't rebuilding the streets involve removal of contaminated soil, and thus the TIF won't be sufficient? A. We will be adding soil to the streets, not removing it, We'll add 10,000 cu. yds.

6. Because of the late hour, Councilor Paul ceded her time and will report in October and we lacked time for "member items/open forum."
7. Meeting adjourned at 9 pm.

Respectfully submitted, Charles Simpson

Neighborhood Planning Assembly Agenda for the Wards 2 and 3

Thursday, September 8, 2016

McClure Multi-Generational Center/Champlain Senior Center, 241 N. Winooski Ave.

FREE Community Dinner at 5:30 pm

Facilitator: Ryan McLaren, Steering Committee

---

6:30PM - Welcome & Introductions

6:35PM - Don Sinex, Burlington Town Center Project (40 mins)

7:15PM - Burlington Schools Update - Ward 2/3 School Commissioners (30 Mins)

7:30PM - North Avenue Pilot Project - Elizabeth Gohringer, Department of Public Works

7:45PM - George/Pearl Street Lofts Project Update - John Alden

8:00PM - Public Comment - Opportunity for residents to share comments on any topic and for suggestions for future NPA agendas (please limit any commentary to one minute)

## Neighborhood Planning Assembly Agenda for the Wards 2 and 3

Thursday, September 8, 2016

McClure Multi-Generational Center/Champlain Senior Center, 241 N. Winooski Ave.

Draft

Meeting start time: 6:40pm

Steering Committee member present: Infinite Culcleasure Ward 3; Fauna Hurley Ward 3; Barbara McGrew Ward 3; Ryan McLaren Ward 3; Tony Redington Ward 2; Patrick Johnson Ward 2

### **Don Sinex, Burlington Town Center Project- Liz Miller and Jesse Beck**

BTC presentation

Liz helps with Communication and Jesse is Project Architect. Presentation also on CEDO website.

<https://www.burlingtonvt.gov/CEDO/BTV-Mall-Redevelopment-Process>

Project doesn't own Macy People's and Free Press building.

The New St. Paul Street divides the project in two phases. St Paul, has mall retail, housing and office tower. The website has primary goals for housing, economic development in jobs, and wrap around services in the downtown. Housing has not been designated on what floor it will be on yet. Still looking at the inclusionary units and market housing location. There is a two floor tenant of UVM Medical Center. In phase one, the mall will be removed and has two levels of retail.

Phase two is under the ground. There's a 3<sup>rd</sup> party that developing a 3D walk through of the streets. The project will LEED Gold. DPW expectation that the property takes care of storm water and connect to City storm water. Have roof top water retention and solar power on the tower. 274 units 20% inclusionary 55, which is permanent affordable 80 units of Champlain College that yet to be negotiated; the rest is market rate. 160ft is the height. Overlay district allowed for this height and allows for another 15 for mechanical. The observation tower is part of the height and not part of the TIF. Right now at conceptual phase and if project gets voted in will go through Major Project review. Feasibility study is being developed but the office space would be what the market will bear.

### **Burlington District School Update-Brian Cina and Liz Curry**

Negotiation process but is at the end. Hope to reach an agreement to secure the tax payer's ability to pay and also continue to attract quality teachers. 2013-2016 is the current contract term.

Fact finding and negotiation details can be found on District website. Sept 12 will go into mediation.

<http://district.bsd.schoolfusion.us/modules/cms/pages.phtml?pageid=332596>

Living contract which pegs the teachers with the surrounding salary. Problem with this is if other district are paying higher it locks the district to pay similarly even if not fiscally able in the SBD budget. This set

The areas that set the union and district apart are; the District where salaries are set by other districts. Cannot longer sustain this. Looking to still have BSD teacher salary to still be at the midpoint range. Healthcare is a problem. Co-pay is 15% and asking to have teachers' pay more of the co-pay. Also teacher can take classes. This is 300k of budget. Looking to be more strategic with the class taken to be changed to meet the needs of students. The Superintendent hired a strong administration team and the beginning of the year has gone smooth. There is a committee that tracks student outcome and there's a diversity and equity committee. One thing implemented is a trauma training due to the needs of students. The school is moving forward to do Restorative Justice Practices in schools to not push students out.

#### **North Avenue Pilot Project-Senior Planner-Nicole Losche and Cindy Cook Public Outreach Consultant**

North Ave Pilot implemented in July and taking in all the adjustments based on feedback. Changes made were: reduced Bollards, created pull out for south bound bus next to Hannaford's, added additional sign bikers to ride alongside with cars. Still doing data collection and public engagement. Looking at bike count, collision reports, and City wide survey. There will public forum on Sept 20<sup>th</sup> 7pm in Miller Center. At City Council meeting on Oct. 17 DPW will give a report which as a 4month check in. This will give time if any changes need to be made can be done before winter. Biker education will continue. Ballers will be removed for the winter due to plowing and possibly sooner. As school resumes, DPW and CCRPC will continue to observe the corridor and collect data to assess additional morning traffic. Need to see how the pilot handles during school.

#### **George/Pearl Street Lofts Project Update-John Aldon and Julio**

Plan BTV is still calling for more housing. This projects fits into the targeted areas in the City for more infill areas and creating more density. Residential structures will be on George and Pearl. Former Bove's restaurant will be removed. Bove's is not a historical site but will memorialize through the story and history of Little Italy on an informational plaque infused with a video documentary. Will also preserve some items inside the restaurant such as the jukebox, pictures, and fixtures to bring to shop in Milton to have a little museum. One parking underground and one on ground. Project holds 62 apartment units which 20% is inclusionary housing. 3 story in front and 4 in back on George Street. There is outdoor bike parking and each housing unit has storage unit next to the garage. There will be some green strips that will be incorporated into the project but don't have much to work with because there is no room it's a pedestrian sidewalk. The construction timeline would be ahead of Burlington Town Center and hoping to start in late spring. Don't have to go through ACT 250 because this project is in a designated downtown and providing housing. The state passed this ruling for all downtown development projects. Will still need to go through the development review processes. This project is aiming at workforce housing and working with CEDO to see how to do this. The aim is to keep in middle to low income.

Meeting Adjourn: 8:52pm

Date of Assembly : **9 / 20 / 2016**

Start Time: (Commence): **7:05 PM**

Location: **DPW Building, Pine St.**

Finish Time: (Adjourn): **9:05 PM**

Notetaker: **Nate Orshan**

Steering Committee Members in Attendance:

**Alec Bauer**  
**Elisa Nelson**  
**Nate Orshan**

## Discussion Topics and Action Items:

### (1) Safety in the Neighborhood - Lt. John Young, Burlington Police Department

Answered questions such as top South End calls to the BPD (#1: Issues with population of transient people; #2: Issues with motor vehicle use), the Department's approach to traffic violations, the outcome of recent de-escalation training, and more.

### (2) Presentation and Q & A: Burlington Town Center - Don Sinex, Managing Director, Devonwood Investors LLC, and Jesse Beck, President, Freeman French Freeman

Sinex delivered a presentation with a status report for and details about the proposed Burlington Town Center redevelopment project and answered attendee questions. The zoning amendment is in its final stages, with a City Council public hearing on September 29. When asked if a critical dependency such as the zoning amendment were not passed what Devonwood Investors would do, Sinex stated that they would still try to propose some development project, though the scope and nature of such a project would depend on timing.

### (3) Update: City Market South End - John Tashiro, General Manager, and Allison Weinhagen, Director of Community Engagement

Tashiro stated that the new store is on schedule for a Summer 2017 opening. Weinhagen shared details about recent Design Review Board meetings and developments that had occurred since their last presentation for the NPA. Among details shared were the fact that the City will not act to temporarily dead-end the streets along Briggs Street and the fact that City Market moved the entire footprint for the building two feet to the east (to accommodate vehicle entrances and exits from a single driveway) and three feet to the south (to accommodate a potential right-turn lane for the Champlain Parkway when it is finally built).

### (4) NPA Related Open Forum and Closing

Tony Redington announced that, at the next month's Ward 5 NPA meeting (Thursday, October 20) in addition to a presentation about the Burlington Town Center redevelopment project, the Coalition for a Livable City would be announcing a proposal to modify the plans for the Champlain Parkway.

### No action items.

Motion to adjourn adopted at 9:05 PM.

Location: UVM Medical Center, McClure Lobby Conference Room

Date: October 12, 2016

Time: 7.00 p.m.

Draft

7.00 p.m.: Welcome and Introductions

7.05: City Council Update

7.25: Speak Out: Including any election candidates who wish to be recognized - (no draft ballot yet so regrettably no customary "candidates' forum".)

7.45: A chance to meet newly appointed CEDO Director, Noelle MacKay, with a brief introduction and Q&A.

8.00: Devonwood Investors' presentation. Not clear if Don Sinex will be with us, but either Elizabeth Murray, Jesse Beck or Don Sinex, or a combination of all three, will join us to discuss the Town Center redevelopment, and entertain Q&A.

8.30: Coalition for a Liveable City: Genese Grill will offer a different perspective, with Q&A.

9.00: Close

Emily Lee, Ward 8 NPA Steering Committee

Dana Kamencik, Ward 1 NPA Steering Committee

Richard Hillyard, Ward 1 NPA Steering Committee

Parking: In the McClure Garage, free, courtesy of UVM MC.

Steering Committee Members Present  
Richard Hillyard-Ward 1, Dana Kamencik-Ward 1.

Start time 7:04pm

### **City Council Updates**

Sharon Bushor-Ballots have Capital Plan and Tax Increment Financing(TIF) for overlay zoning to open up streets. Not supportive for some of traffic charter change due to the funds going into parking and feel that this should not be done through bonds. Went through lengthy process to change a zone from institutional to residential in order to protect the character, hoping that residential medium will go forward. A development is being built across the street of Fletcher Place. The development going through Development Review Board and Conservation Board. There are some concerns that the development is on a slope and might not hold due to the capacity of the project.

Selene Colburn – Did not support zoning changes and is glad to hear from the public about this zoning proposal change. There was support and favor for the project but not for the size of the project. Wish there was more of a conversation to reach a middle ground on compromising instead of a black or white yes or no. Sharon did a tremendous work with zoning review. Chair Development and Revitalization Committee is meeting on the 18<sup>th</sup> to review consultants from inclusionary zoning, the report has not been released by the administration. Originally was going to vote on TIF but a group petitioned to put zoning on the ballot too. If zoning doesn't pass, then we'll need to go back to the developer to work with existing zoning, although the developer has stated that this is the way the project will be. If TIF passes, the money will still be there to open up the streets. The current zoning does not allow to open up the streets.

Brian Cine - lives in Ward 2, but under Chittenden 6-4 due to redistricting. Cine wants to work on legislative level to apply background in social work to make public change, also currently on the School District Board.

Selene Colburn running for 6-4 Legislative District. Currently serving 2<sup>nd</sup> term in City Council, Librarian at UVM. Colburn wants to run on state level because hits some barriers of advocating for opiates recovery and limited access to mental health services on a municipal level. She also works on environmental and Housing issues.

### **Fire Department Bonds**

Chief Steven Locke- Item #1 is Capital bond and includes replacing 4 firetrucks. Trucks have over 100k and sometimes trucks are out of service and need to borrow trucks from South Burlington. Also waterline is unable to deliver water flow due to the rotting infrastructure. This inhibits the quality of services that can be delivered.

### **Community and Economic Development Office-CEDO**

Noelle MacKay- New CEDO Director. Her previous employer was with Smart Growth Vermont and also Commissioner of Housing and Community Development. In CEDO there is Community Justice Center which works with re-entry and Restorative Justice in schools. CEDO also supports projects such as Moran Plant and other development projects. MacKay has been doing CEDO chats to understand what's working and what's not with staff, past staff, Dept., and community partners. This will help understand what CEDO can do and should do. In CEDO there has been a history of creativity of community and economic development. CEDO has Burlington Lead Program (BLP) to make homes safer and more livable. This year hit 100 homes in BLP and looking at diversifying funding streams beyond grants. New Housing staff will start Nov. 1<sup>st</sup> and also recently filled in new finance staff too. Looking to ramp up communication, re-branding, and marketing. CEDO has three teams and each has Assistant Directors. The teams are Sustainable Housing and Economic Development (SHED), Community Housing and Economic Opportunity Programs (CHOP) and Community Justice Center (CJC). Housing is in all three Teams. TIF history has a long history of modification and change. The most recent is on the Town Center and Waterfront. Currently reviewing Consultant report on how inclusionary zoning has worked in other cities to making small changes and tweaks before releasing it to the public. Had a 3<sup>rd</sup> party to study a feasibility study and there is not a full ROI report to produce. Some of the information is confidential and developers need this information to produce intent letters. In terms of getting money worth there are several terms in the predevelopment agreement that need to be done first. On the CEDO website, there is information about what we are getting back.

There was a question for Noelle regarding the unallocated Community Development Block Grant (CDBG) money from last year and using it for the opioid crisis. After the NPA meeting Mary Esbjerg provided this answer to the question. "There are unallocated funds from our CDBG Program Years 2015 and 2016 which will be advertised along with CDBG funds for 2017 beginning in December 2016, with new grants being available July 2017. We will include, as an eligible activity, health-related projects with a focus on opiate addiction related services. The application process is an open and competitive one; all decisions are made by a citizen advisory group, presented to the Mayor and confirmed by City Council."

### **Devonwood-The zoning overlay shape and design**

Jesse Beck and Elizabeth Murray. Liz- Started last January when pre-agreement started. Jesse one of the Architect-Freeman French Freeman. Specialty has been doing complex projects such as the airport and statehouse so Beck is used to this size of development. Devonwood properties are Macy's to LL Bean, Old Parking Garage. Does not include Free Press and Bank building. The overlay district that was passed starts past lakeside garage and larger than Devon Wood Properties. Phase 1 will deconstruct the entire mall. Phase 2 will be small to medium retailers. In the upper level there will be a 3 level garage, housing, 2 floors for UVM Medical Center offices and a public terrace. New streets restored will be on St. Paul and Bank street. There will be 60ft wide street between phase 1 and 2. Height is 160ft. Free Press is 105

to offer some perspective of 160ft tower next to it. Project signed on to 2030 challenge to reduce energy consumption. Any TIF district has to have economic development that is produced from a project. Three million dollars will be generated from property taxes and 75% will go to paying it back in 15 years. Taxes will not go towards schools until TIF district is paid for. The developer has a Facebook and Twitter Feed. Search Burlington Downtown Redevelopment. Opinions differ but from the developer's point the City requested to reconnect city streets. To minimize risk and disruption the first phase will be away from Church Street. The permitting process will take 4 or 5 months which will go into 2017. Developer will have to get the project financing done and development agreement finalized with the City and Council. The development agreement will also show community benefit. Pieces will have job fair and housing. TIF is reimbursement to the developer for the public streets only. What you see now is conceptual design that will evolve when going through Development Review Board.

#### **Coalition for a Livable City (CLC)**

Genese Grill, Charles Simpson, Steve Goodwin. The 160ft and 105ft are not 4 stories than what Devonwood has claimed and is much higher. There are two items on ballot and if item 3 of the zoning gets voted down then CLC would like to offer consultant services to help develop a new project. If Mayor would work with community's vision of Plan BTV then it would be better project. The Mayor and Council promise developer TIF and Zoning change in the interest of developer. CLC is not against development but wants a more affordable and sustainable project. Glad to see that some of the parking can be wrapped but there are still three open floors. If we want more parking there is the suggestion to dig underground to reduce height. A sustainable idea is to look at less parking downtown and more on the need for an electric trolley system. Also the 80 student units should be eliminated from the project and these units should be on campus. The developer needs streets for the plan not for public connectivity. The developer should pay for the streets not the taxpayers. What happens to TIF is taxes are frozen and 100% goes to pay bond holder and will continue for the life of the TIF. There has never been a developer in history that has the tax payer pay public streets. They are asking voters to make a decision but numbers are not available. The Business Associate hired a lobbying to advocate for ballot items. CLC filed a Freedom of information Act for the feasibility report but was denied.

9:20 pm End

Neighborhood Planning Assembly Agenda for the Wards 2 and 3  
Thursday, October 13, 2016  
McClure Multi-Generational Center/Champlain Senior Center, 241 N. Winooski Ave  
Draft

Steering Committee Present: Ryan McLaren Ward 3, Barbara McGrew Ward 3, Andrew Champagne Ward 2, Tony Redington Ward 2, Patrick Johnson Ward 2

Start time 6:30pm

**Public Comment**

Tony Redington-redesign for Champlain Parkway meeting will be held in early Nov. The meeting will work on bringing a proposal to bring to Mayor. The proposal will reduce parkway cost by 25% and will include 2 acres of land for business innovation and 2 acres for preservation.

Bill Diaz-Chaplin of VFW of Winooski. Consider supporting veterans, help improve their lives and get to know the people who served this country.

**BTV Great Streets Initiative, Kirsten Merriman Shapiro, CEDO**

Project will improve corridor in main street and city hall park. Public meeting will be held on November 16<sup>th</sup>, 6:30pm, City Hill in Contois Hall. Great Street has a website where the public can leave comments <http://greatstreetsbtv.com/> This project started out of 18+ different plans and taking all the planning processes over the 5+ years and making it into one great plan. Parts of the plan is to standardize storm water and curb extension depending on locations. The plans need to add to vibrancy, walkability, durability, functional and keep in state and federal standards. These are the standards that will be developed over months and be done by January 2017. This is 6 block project.

**Burlington Town Center Project, Don Sinex**

City Council passed the zoning law amendment creating a new an overlay district. Mayor decided to place this zoning law on the ballot as question for the voters to decide. Overall felt that this is a good decision because this brings a conclusion and this will be a firm decision. The zoning is a good thing for unique projects. When developer buy a piece of real estate they start from a framework and working with the City there will be other factors that come up such as the two public streets. This becomes a process to redesign. There is no plan B for this project. This project has been worked on for two years. If the Tax Increment Finance does not pass, then the public streets won't happen. The cost of an underground garage and removal of soil will be 3x times more in cost to develop the project. Looking at using some of the existing garage to offset the height. This project has multiple uses and will generate

revenue. Timing of financing is good and this is a low interest rate. In the project there is 55 Affordable units. This is only rental housing. Efficiencies are studios one bed room and two bed-room. This project will be Gold LEED, sustainable and the design will still need to go through DRB.

### **Crosswalk Improvements on North Avenue, Martin Lee and Roger Dickerson**

This project is funded 80% by VTrans and 20% by the City 20%. New crosswalks are on Wards St., North Ave and Village Green, Gosse Court and Green Acres Drive. Project is developing a conceptual plan and there will be a public process. At the top of Ward St. on North Ave. crosswalk will have a safer crossing. Will install flashing beacons on both sides of N. Ave. Will also have a curb extension which will provide a better line of sight (20ft) and minimize parking next to the crosswalk. On the other streets further down North Ave. will also install yield markings to yield to pedestrians. There are two locations that are going to have more intense pedestrian crosswalk. This is not new technology. Federal Highway has been established for these types of devices.

### **Mayor Miro Weinberger, November Ballot Initiatives**

There are 6 items on the local ballot but going to talk about 4 ballot items. 1<sup>st</sup> is general bond, 2<sup>nd</sup> is water infrastructure bond, 3<sup>rd</sup> is new zoning for downtown core, and 4<sup>th</sup> is 21 million in Tax Increment Financing (TIF). Ballot 1 and 2 are focused on infrastructure. The water infrastructure is 75 years old. 6 firetrucks are old and also need to finish bike path. This is a 50-million-dollar plan. 1 needs a 67% yes vote to pass. The City will not be coming back for more bonding for at least 5 years. Although there is some uncertainty around storm water because there are regulatory changes and this does not include the schools because they are separate from the City's budget. Memorial Auditorium is not part of this capital bond. Before doing bonds for Memorial we will need to have public process on how we will want to know what we want to do with this space. Items 3 and 4 is about the downtown core. #4 is TIF investment. Feel this is a rare and outstanding opportunity for the City. Property there now is a 70's declining mall that is not keeping up with the commerce side. From the project there will be an increase of retail, keeping well-paying jobs here, and create a massive revenue to city and state. Project will have environmental benefits will need to be green LEED Gold, heating and cooling is more efficient, also there will be less vehicle trips for those living down town will lower carbon foot print. This is a huge win for affordability and this keeps inclusionary zoning in place forever. Burlington has used TIF to change for the better such as in the Waterfront district. If it gets to the final development agreement with the developer, what will come out is a new operation run out of the City for people from all backgrounds to get job training. If voted yes, we will have to flesh out final agreements and the project still needs go through DRB. This year the City double the Housing Trust Fund to have families stay in the homes. The City was instrumental in the creation of Bright Street Housing and will continue to support affordable housing. 2 years ago the project did not have storm water management, public streets, livable wage jobs. TIF will cover 8 blocks all will be broadly public infrastructure.

### **Fire Department Bond Initiatives - Chief Steven Locke, BFD**

Chief Steven Locke- Item #1 is Capital bond and includes replacing 4 firetrucks. Trucks have over 100k and sometimes trucks are out service and need to borrow trucks from South Burlington. Also Item 2 of the waterline is unable to deliver water flow due to the rotting infrastructure. This inhibits the quality of services that can be deliver.

**Dan Albrecht, CCRPC Brownfields Program**

Chittenden County Regional Planning Commission (CCRPC) administers the Brownfield Program that offer site planning assessment and cleanup planning assistance for properties that are vacant or underutilized because of potential petroleum or hazardous substance contamination. CCRPC can assist property owners and potential developers by conducting environmental studies and/or draft site clean-up plans and cost estimates. Help identify sources of potential funding to clean up and redevelop the property to provide assurance to redevelop in urban environment. For more information, contact Dan Albrecht 802-861-0133 or [dalbrecht@ccrpcvt.org](mailto:dalbrecht@ccrpcvt.org)  
<http://www.ccrpcvt.org/>

**Coalition for a Livable City**

Video-Google Earth perspective of development not the overlay.

The people that are saying yes on 3 and 4 are saying they can't get LEED, storm water management, affordable housing without this project. In the past Bernie Sanders wanted to build on the waterfront and this got voted down and out of this the public got what we have today, a better waterfront project. This is a bad deal for affordable housing and misuse of TIF funding. Traditionally the developer pays for their own streets. Once this is voted down the CLC will offer its contracting services to the developer. CLC is made up of professional; engineers, graphic designers, lawyers, and teachers. Having TIF go towards building the streets is a misuse where it should be going to helping to improve other infrastructure in the city. There are two types of Affordable housing; one is section 8 and then one is inclusionary housing. With existing projects there is 2500 units and only affordable 500 units of subsidies units. Most of what the Mayor is talking about is inclusionary. We want to see more affordable housing for families and seniors. TIF is not bad but in this way it's going to be for the developer to pay for his road. There was a feasibility study done and all the numbers are adapted. It might be feasible but the public doesn't have the numbers. Without the numbers the public can't be informed to vote on the TIF. Filed for Freedom of information Act but was denied. Middle class and poor people are being driven out of the City. This is a small City and there will also be gentrification of local business too. CLC will be canvassing and has a Facebook page. | Yes ? No |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                         |
| 1        | Design | <b>SSc3 Open Space [1]</b><br>Provide outdoor space greater than or equal to 30% of the total site area (including building footprint). A minimum of 25% of that outdoor space must be vegetated (turf grass does not count as vegetation) or have overhead vegetated canopy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Landscape Architect, Civil, Owner</b><br>Note 25% vegetated requirement; this would require an extensive amount of green roof. We consider this unlikely.                                                                                                                                                                                            |
| 3        | Design | <b>SSc4 Rainwater Management [2-3]</b><br>Option 1. Percentile of Rainfall Events<br>* Path 1. 95th Percentile: In a manner best replicating natural site hydrology processes, manage on site the runoff from the developed site for the 95th percentile of regional or local rainfall events using low-impact development (LID) and green infrastructure. [2]<br>* Path 2. 98th Percentile: Same as Path 1 but for the 98th percentile of rainfall events.<br>* Path 3. Zero Lot Line projects only - using green infrastructure and low-impact development, manage 100% of runoff from 85th percentile rainfall event on site through infiltration, evapotranspiration, or capture and reuse. [3]<br>Option 2. Natural Land Cover Conditions: Not applicable to project | <b>Civil</b><br>Path 3 may be achievable with infiltration in combination with green roofs, pourous paving, and planter boxes. Explore infiltration potential.                                                                                                                                                                                          |
| 2        | Design | <b>SSc5 Heat Island Reduction [1-2]</b><br>Option 1. Nonroof and Roof: Provide a total amount of non-roof measures and high-reflectance roof as per formula in reference guide [2]<br>Option 2. Parking under Cover: Place a minimum of 75% of parking spaces under cover [1]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Landscape Architect, Civil, Architect</b><br>Between PV systems, light colored membranes, and green roofs, this credit should be achievable. The SRI and color of pervious play surface for the Daycare must take this credit into account but there should be a compliant play surface solution.                                                    |
| 1        | Design | <b>SSc6 Light Pollution Reduction [1]</b><br>Meet uplight and light trespass requirements, using either the backlight-uplight-glare (BUG) method or the calculation method. Projects may use different options for uplight and light trespass. See reference guide for detailed requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Landscape Architect, Civil, Electrical</b><br>During concept design, establish the methods that will be used to address uplight and trespass. Establish the lighting zone of the project property. SE Group will need to provide additional photometrics beyond requirements for zoning compliance in order to document compliance with this credit. |
| 4        | 3      | <b>Water Efficiency (WE)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>11 Points Possible</b>                                                                                                                                                                                                                                                                                                                               |
| Y        | Design | <b>WEp1 Outdoor Water Use Reduction</b><br>Option 1. (Always use) Show that the landscape does not require a permanent irrigation system beyond a maximum two-year establishment period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Landscape Architect</b><br>Have always achieved this credit on Vermont projects. Install no permanent irrigation systems. Hose bibs are OK.                                                                                                                                                                                                          |
| Y        | Design | <b>WEp2 Indoor Water Use Reduction</b><br>For the fixtures and fittings listed in Table 1, as applicable to the project scope, reduce aggregate water consumption by 20% from the baseline. Base calculations on the volumes and flow rates shown in Table 1. All newly installed toilets, urinals, private lavatory faucets, and showerheads that are eligible for labeling must be WaterSense labeled. Install appliances, equipment, and processes within the project scope that meet the requirements listed in the requirement tables.                                                                                                                                                                                                                               | <b>Plumbing</b><br>This has not been difficult to achieve on past projects. Baseline is minimally code compliant fixtures (e.g. baseline assumes such things as 1.6gpf toilets) Possibly more complicated with private residential use, but we must achieve this water use reduction.                                                                   |
| Y        | Design | <b>WEp3 Building-Level Water Metering</b><br>Install permanent water meters that measure the total potable water use for the building and associated grounds. Meter data must be compiled into monthly and annual summaries; meter readings can be manual or automated. Commit to sharing with USGBC the resulting whole-project water usage data for a five-year period beginning on the date the project accepts LEED certification or typical occupancy, whichever comes first. This commitment must carry forward for five years or until the building changes ownership or lessee.                                                                                                                                                                                   | <b>Plumbing</b><br>Building level metering required by city, no issue here.                                                                                                                                                                                                                                                                             |

| 1        | Design | <p><b>EAc3 Advanced Energy Metering [1]</b></p> <p>Install advanced energy metering for all whole-building energy sources used by the building and any individual energy end uses that represent 10% or more of the total annual consumption of the building.</p> <p>The advanced energy metering must have the following characteristics: Meters must be permanently installed, record at intervals of one hour or less, and transmit data to a remote location; Electricity meters must record both consumption and demand. Whole-building electricity meters should record the power factor, if appropriate; The data collection system must use a local area network, building automation system, wireless network, or comparable communication infrastructure; The system must be capable of storing all meter data for at least 36 months; The data must be remotely accessible; All meters in the system must be capable of reporting hourly, daily, monthly, and annual energy use.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p><b>Mechanical, Electrical</b></p> <p>This dovetails with municipal/ Burlington Electric Department goals for green infrastructure. Discuss incentives and cost-sharing with BED. Individually meter residential units and consider individually metering each tenant rather than including electrical use in leases- this strategy may help earn additional LEED points elsewhere.</p> |
| 2        | Const. | <p><b>EAc4 Demand Response [1-2]</b></p> <p>Case 1. Demand Response Program Available:<br/>Participate in an existing demand response (DR) program. Design a system with the capability for real-time, fully-automated DR based on external initiation by a DR Program Provider. Semi-automated DR may be utilized in practice. Enroll in a minimum one-year DR participation amount contractual commitment with a qualified DR program provider, with the intention of multiyear renewal, for at least 10% of the estimated peak electricity demand as determined under EA Prerequisite Minimum Energy Performance. Develop a comprehensive plan for meeting the contractual commitment during a Demand Response event. Include the DR processes in the scope of work for the commissioning authority, including participation in at least one full test of the DR plan. [2]</p> <p>Case 2. Demand Response Program Not Available:<br/>Provide infrastructure to take advantage of future demand response programs or dynamic, real-time pricing programs. Install interval recording meters with communications and ability for the building automation system to accept an external price or control signal. Develop a comprehensive plan for shedding at least 10% of building estimated peak electricity demand as determined under EA Prerequisite Minimum Energy Performance. Include the DR processes in the scope of work for the commissioning authority, including participation in at least one full test of the DR plan. Contact local utility representatives to</p> | <p><b>Electrical, Owner, Utility</b></p> <p>A demand response program is available from both BED and Vermont Gas; discuss incentives and implementation with these utilities.</p>                                                                                                                                                                                                         |
| 2        | Design | <p><b>EAc5 Renewable Energy Production [1-3]</b></p> <p>Use renewable energy systems to offset building energy costs. The use of solar gardens or community renewable energy systems is allowed if both: The project owns the system or has signed a lease agreement for a period of at least 10 years; The system is located with the same utility service area as the facility claiming the use.</p> <p>Credit is based on the percentage of ownership or percentage of use assigned in the lease agreement.</p> <p>1 1% of total building energy cost offset</p> <p>1 5% of total building energy cost offset</p> <p>1 10% of total building energy cost offset</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p><b>Owner, Electrical</b></p> <p>We will need an energy model to predict building energy use in order to understand the % we will generate with the PV array. Note that PV generated power gets double counted as energy use reduction in EA c1.</p>                                                                                                                                    |
| 1        | Design | <p><b>EAc6 Enhanced Refrigerant Management [1]</b></p> <p>Option 1. No Refrigerants or Low-Impact Refrigerants: Do not use refrigerants, or use only refrigerants (naturally occurring or synthetic) that have an ozone depletion potential (ODP) of zero and a global warming potential (GWP) of less than 50.</p> <p>Option 2. Calculation of Refrigerant Impact: Select refrigerants that are used in heating, ventilating, air-conditioning, and refrigeration (HVAC&amp;R) equipment to minimize or eliminate the emission of compounds that contribute to ozone depletion and climate change. See reference guide for calculation.</p> <p>[See additional requirements for Retail uses.]</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p><b>Mechanical</b></p> <p>For base building systems and residential units, obtain refrigerant info for all</p>                                                                                                                                                                                                                                                                          |

| <b>2</b> | Const.   | <b>EAc7 Green Power and Carbon Offsets [1-2]</b><br>Engage in a contract for qualified resources that have come online since January 1, 2005, for a minimum of five years, to be delivered at least annually. The contract must specify the provision of at least 50% or 100% of the project's energy from green power, carbon offsets, or renewable energy certificates (RECs).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Owner</b><br>This credit represents the possibility to purchase RECs on the market. We advise using this credit as a backup in case the review of our submission does not return the minimum of 60 points needed for LEED Gold. |
| <b>4</b> | <b>7</b> | <b>Materials &amp; Resources (MR)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>13 Points Possible</b>                                                                                                                                                                                                          |
| <b>Y</b> | Design   | <b>MRp1 Storage &amp; Collection of Recyclables</b><br>Provide dedicated areas accessible to waste haulers and building occupants for the collection and storage of recyclable materials for the entire building. Collection and storage areas may be separate locations. Recyclable materials must include mixed paper, corrugated cardboard, glass, plastics, and metals. Take appropriate measures for the safe collection, storage, and disposal of two of the following: batteries, mercury-containing lamps, and electronic waste.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Owner, Architect, Civil</b><br>Provide standard waste handling procedures that will be used at this facility.                                                                                                                   |
| <b>Y</b> | Const.   | <b>MRp2 Construction and Demolition Waste Management Planning</b><br>Develop and implement a construction and demolition waste management plan to establish waste diversion goals for the project by identifying at least five materials (both structural and nonstructural) targeted for diversion. Approximate a percentage of the overall project waste that these materials represent. Specify whether materials will be separated or commingled and describe the diversion strategies planned for the project. Describe where the material will be taken and how the recycling facility will process the material.<br>Provide a final report detailing all major waste streams generated, including disposal and diversion rates.<br>Alternative daily cover (ADC) does not qualify as material diverted from disposal. Land-clearing debris is not considered construction, demolition, or renovation waste that can contribute to waste diversion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Specifications, Contractor</b><br>Specify CDWM requirements.<br>Contractor to develop, submit, implement and track CDWM plan.<br><b>Note this was previously a credit but is now a pre-requisite</b>                            |
| <b>3</b> | <b>2</b> | <b>MRc1 Building Life-Cycle Impact Reduction [2-5]</b><br>Option 1. Historic Building Reuse. See reference guide, [5]<br>Option 2. Renovation of Abandoned or Blighted Building. See reference guide, [5]<br>Option 3. Building and Material Reuse. Reuse or salvage building materials from off site or on site as a percentage of the surface area, as listed in Table 1. Include structural elements (e.g., floors, roof decking), enclosure materials (e.g., skin, framing), and permanently installed interior elements (e.g., walls, doors, floor coverings, ceiling systems). Exclude from the calculation window assemblies and any hazardous materials that are remediated as a part of the project. Points by percentage of completed project surface area reused. 25% [2], 50% [3], 75% [4]<br>Option 4. Whole-Building Life-Cycle Assessment. Conduct a life-cycle assessment of the project's structure and enclosure that demonstrates a minimum of 10% reduction, compared with a baseline building, in at least three of the six impact categories listed below, one of which must be global warming potential. No impact category assessed as part of the life-cycle assessment may increase by more than 5% compared with the baseline building.<br>Global warming potential; depletion of the stratospheric ozone; acidification of land and water sources; eutrophication (nitrogen or phosphate); formation of tropospheric ozone; and depletion of nonrenewable energy resources. [3] | <b>Full Team</b><br>Would require a whole building life-cycle assessment. Potentially costly.                                                                                                                                      |

| 1       | 1 | Const. | <p><b>MRC2 Environmental Product Declarations [1-2]</b></p> <p>Achieve one or more of the options below, for a maximum of 2 points. One point per Option.</p> <p>Option 1. Environmental Product Declaration (EPD). Use at least 20 different permanently installed products sourced from at least five different manufacturers that meet one of three disclosure criteria.</p> <p>(1) Products with a publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that have at least a cradle to gate scope are valued as one quarter (1/4) of a product for the purposes of credit calculation.</p> <p>(2) Environmental Product Declarations which conform to ISO 14025, 14040, 14044, and EN 15804 or ISO 21930 and have at least a cradle to gate scope:</p> <p>Industry-wide (generic) EPD -- Products with third-party certification (Type III), including external verification, in which the manufacturer is explicitly recognized as a participant by the program operator are valued as one half (1/2) of a product for purposes of credit calculation.</p> <p>Product-specific Type III EPD -- Products with third-party certification (Type III), including external verification in which the manufacturer is explicitly recognized as the participant by the program operator are valued as one whole product for purposes of credit achievement calculation.</p> <p>(3) USGBC approved program -- Products that comply with other USGBC approved environmental product declaration frameworks.</p> <p>Option 2. Multi-Attribute Optimization.</p> <p>Use products that comply with one of the criteria below for 50%, by cost, of the total value of permanently installed products in the project.</p> <p>(1) Third party certified products that demonstrate impact reduction below industry average in at least three of the following categories are valued at 100% of their cost for credit achievement calculations: global warming potential; depletion of the stratospheric ozone layer; acidification of land and water sources; eutrophication (nitrogen or phosphate); formation of tropospheric ozone; and depletion of nonrenewable energy resources.</p> <p>(2) USGBC approved program -- Products that comply with other USGBC approved environmental product declaration frameworks.</p> <p>Products sourced (extracted, manufactured, purchased) within 100 miles of the project site are valued at 200% of their base contributing cost. Structure and enclosure materials may not constitute more than 30% of the value of compliant building products.</p> | <p><b>Specifications, Contractor</b></p> <p>Include requirements for the submission of EPDs in specifications.</p>                                                                                                                                                                                                 |
| 2       |   | Const. | <p><b>MRC3 Sourcing of Raw Materials [1-2]</b></p> <p>Achieve one or more of the options below, for a maximum of 2 points. One point per Option.</p> <p>Option 1. Raw Material Source and Extraction Reporting. Use at least 20 different permanently installed products from at least five different manufacturers that have publicly released a report from their raw material suppliers which include raw material supplier extraction locations, a commitment to long-term ecologically responsible land use, a commitment to reducing environmental harms from extraction and/or manufacturing processes, and a commitment to meeting applicable standards or programs voluntarily that address responsible sourcing criteria. Products sourced from manufacturers with self-declared reports are valued as one half (1/2) of a product for credit achievement. Third-party verified corporate sustainability reports (CSR) which include environmental impacts of extraction operations and activities associated with the manufacturer's product and the product's supply chain, are valued as one whole product for credit achievement calculation.</p> <p>Option 2. Leadership Extraction Practices. Use products that meet at least one of the responsible extraction criteria for at least 25%, by cost, of the total value of permanently installed building products in the project: Extended producer responsibility; Bio-based materials; Certified Wood products; Materials reuse; Recycled content; USGBC approved program.</p> <p>For credit achievement calculation, products sourced (extracted, manufactured and purchased) within 100 miles (160 km) of the project site are valued at 200% of their base contributing cost. Structure and enclosure materials may not constitute more than 30% of the value of compliant building products.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p><b>Specifications, Contractor</b></p> <p>Documentation is time intensive and costly. Was previously worth more points. While this may not add much to construction costs, it will require documentation by subcontractors, contractors, and LEED consultant/ architect, as well as specifications language.</p> |

| Yes     | ? | No        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1       | 1 | Const.    | <b>MRC4 Material Ingredients [1-2]</b><br>Achieve one or more of the options below, for a maximum of 2 points. One point per Option.<br>Option 1. Material Ingredient Reporting. Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm) Manufacturer Inventory. The manufacturer has published complete content inventory for the product; Health Product Declaration. The end use product has a published, complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration open Standard; Cradle to Cradle. The end use product has been certified at the Cradle to Cradle v2 Basic level or Cradle to Cradle v3 Bronze level; USGBC approved program.<br>Option 2. Material Ingredient Optimization. Use products that document their material ingredient optimization for at least 25%, by cost, of the total value of permanently installed products in the project using one of these paths: GreenScreen v1.2 with no Benchmark 1 hazards; Cradle to Cradle Certified; USGBC approved program.<br>Option 3. Product Manufacturer Supply Chain Optimization<br>Use building products for at least 25%, by cost, of the total value of permanently installed products in the project that are sourced from product manufacturers who engage in validated and robust safety, health, hazard, and risk programs which at a minimum document at least 99% (by weight) of the ingredients used to make the building product or building material, and are sourced from product manufacturers with independent third party verification of their supply chain that verifies processes are in place to identify, document and communicate information about safety, health, and hazards of chemicals within the products throughout the supply chain.<br>For credit achievement calculation of options 2 and 3, products sourced (extracted, manufactured, purchased) within 100 miles of the project site are valued at 200% of their base contributing cost. For credit achievement calculation, the value of individual products compliant with either option 2 or 3 can be combined to reach the 25% threshold but products compliant with both option 2 and 3 may only be counted once. Structure and enclosure materials may not constitute more than 30% of the value of compliant building products. | <b>Specifications, Contractor</b><br>Option 1 should be attainable. This is a new approach to LEED materials optimization, and the contractor will need to play an active role in sourcing the "20 products from 5 manufacturers" to obtain this point. Specs should identify material categories where documentation is available and require documentation of compliance as part of product submittals. |
| 2       |   | Const.    | <b>MRC5 Construction and Demolition Waste Management [1-2]</b><br>Option 1. Diversion<br>Path 1. Divert at least 50% of the total construction and demolition material; diverted materials must include at least three material streams. [1]<br>Path 2. Divert at least 75% of the total construction and demolition material; diverted materials must include at least four material streams. [2]<br>Option 2. Reduction of Total Waste Material<br>Do not generate more than 2.5 pounds of construction waste per square foot of the building's floor area. [2]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Specifications, Contractor</b><br>Specify CDWM requirements. | Y       |   | Prereq. 1 | <b>EQp1 Minimum IAQ Performance</b><br>For mechanically ventilated spaces (and for mixed-mode systems when the mechanical ventilation is activated), meet the minimum requirements of ASHRAE Standard 62.1-2010, Sections 4-7, Ventilation for Acceptable Indoor Air Quality (with errata), or a local equivalent, whichever is more stringent.<br>For naturally ventilated spaces (and for mixed-mode systems when the mechanical ventilation is inactivated), determine the minimum outdoor air opening and space configuration requirements using the natural ventilation procedure from ASHRAE Standard 62.1-2010 or a local equivalent, whichever is more stringent. Confirm that natural ventilation is an effective strategy for the project by following the flow diagram in the Chartered Institution of Building Services Engineers (CIBSE) Applications Manual AM10, March 2005, Natural Ventilation in Nondomestic Buildings, Figure 2.8, and meet the requirements of ASHRAE Standard 62.1-2010, Section 4, or a local equivalent, whichever is more stringent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Mechanical</b><br>Verify and document compliance.                                                                                                                                                                                                                                                                                                                                                      |

| 1       | 1 | Design | <b>EQc6 Interior Lighting [1-2]</b><br>Select one or both of the following two options.<br>Option 1. Lighting Control. For at least 90% of individual occupant spaces, provide individual lighting controls that enable occupants to adjust the lighting to suit their individual tasks and preferences, with at least three lighting levels or scenes (on, off, midlevel). For all shared multioccupant spaces have in place multizone control systems with at least three lighting levels, lighting for any presentation or projection wall must be separately controlled, switches or manual controls must be located in the same space as the controlled luminaires.<br>Option 2. Lighting Quality. Choose four of the following strategies: low glare fixtures; high CRI; long life light sources; less than 25% direct-only lighting; light/high reflectance interior finishes; light/high reflectance furnishings; proportionate wall/work plane illuminance; proportionate ceiling/work plane illuminance.<br>[Other requirements for Retail.] | <b>Electrical, Owner</b><br>Pursue Option 2 and select the four or more strategies that will be employed on the project. Review whether Option 1 will be achievable on the project.                                                        |
| 3       |   | Design | <b>EQc7 Daylight [1-3]</b><br>Option 1. Simulation. Spatial Daylight Autonomy and Annual Sunlight Exposure. Demonstrate through annual computer simulations that spatial daylight autonomy 300/50% is achieved for 55% [2] or 75% [3] of regularly occupied floor area is achieved. And, demonstrate through annual computer simulations that annual sunlight exposure 1000,250 of no more than 10% is achieved.<br>Option 2. Simulation: Illuminance Calculations. Demonstrate through computer modeling that illuminance levels will be between 300 lux and 3,000 lux for 9 a.m. and 3 p.m., both on a clear-sky day at the equinox, for 75% [1] or 90% [2] of regularly occupied floor area.<br>Option 3. Measurement. Achieve illuminance levels between 300 lux and 3,000 lux for 75% [2] or 90% [3] of regularly occupied floor area as measured on two dates in year following completion.                                                                                                                                                      | <b>Architect, Interiors</b><br>Indicate whether daylight simulation will be able to show credit achievement and/or whether team should plan on field measurement following completion.                                                     |
| 1       |   | Design | <b>EQc8 Quality Views [1]</b><br>Achieve a direct line of sight to the outdoors via vision glazing, not obstructed by patterns or tints that distort color balance, for 75% of all regularly occupied floor area. Additionally, provide at least two of the following four kinds of views: multiple lines of sight to vision glazing in different directions at least 90 degrees apart; views that include at least two of the following: (1) flora, fauna, or sky; (2) movement; and (3) objects at least 25 feet from the exterior of the glazing; unobstructed views located within the distance of three times the head height of the vision glazing; and views with a view factor of 3 or greater, as defined in "Windows and Offices: A Study of Office Worker Performance and the Indoor Environment."                                                                                                                                                                                                                                          | <b>Architect, Interiors</b><br>Provide design concept indicating all regularly occupied spaces, concepts for locations of permanent interior obstructions. Provide building sections through all exterior glazing and skylight conditions. |
| 1       |   | Design | <b>EQc9 Acoustic Performance [1]</b><br>For all occupied spaces, meet the requirements for HVAC background noise, sound isolation, reverberation time, and sound reinforcement and masking.<br>Achieve maximum background noise levels from heating, ventilating, and air conditioning (HVAC) systems per 2011 ASHRAE Handbook, HVAC Applications, Chapter 48, Table 1; AHRJ Standard 885-2008, Table 15; or a local equivalent. Calculate or measure sound levels.<br>Meet the composite sound transmission class (STC) ratings listed in credit Table, or local building code, whichever is more stringent.<br>Meet the reverberation time requirements in credit Table.<br>For all large conference rooms and auditoriums seating more than 50 persons, evaluate whether sound reinforcement and AV playback capabilities are needed. For projects that use masking systems, the design levels must not exceed 48 dBA. Ensure that loudspeaker coverage provides uniformity of +/-2 dBA and that speech spectra are effectively masked.             | <b>Architect, Interiors, Mechanical</b><br>Review credit requirements and confirm readiness to meet credit going forward.                                                                                                                  |

**Subject:** Thank you for your LEED Project Registration

**U.S. GREEN BUILDING COUNCIL**

Dear Jesse Robbins,

Your LEED project has been successfully registered in LEED Online.

|                       |                          |
|-----------------------|--------------------------|
| Project ID            | : 1000097092             |
| Project Title         | : Burlington City Center |
| Project Rating System | : LEED v4 BD+C: NC       |
| Registration Type     | : Individual Project     |
| Registration Date     | : 12/08/2016             |
| Project Location      | : Burlington,VT,US,05401 |

You may now log into LEED Online to manage your project and begin the application process. The first time you log in, you will be presented with a set of 'Getting Started' information that will help you kick off the certification process. Further technical LEED assistance is available through the following resources:

- The help section of LEED Online
- LEED Resources & Tools : <https://new.usgbc.org/leed/certification>
- LEED Reference Guides : <https://new.usgbc.org/store/reference-guides>
- Subscribe to LEED Update, a quarterly e-newsletter from USGBC and GBCI : <https://new.usgbc.org/legacy/account/subscriptions>
- LEEDuser, a third-party resource that offers a variety of supplemental LEED advice: <http://www.leeduser.com>

If you find an error within the LEED Online system, including any of the forms, please report it using of the feedback button, located in the menu bar. If you have questions

We thank you for your  
registration and  
pleasing

## Wall luminaires with single-sided light output

**Housing:** Extruded and die cast aluminum. Mounts directly to a BEGA 19537 box (provided). Die castings are marine grade, copper free ( $\leq 0.3\%$  copper content) A360.0 aluminum alloy.

**Enclosure:** Tempered, clear glass, flush to the die casting to prevent water accumulation. Fully gasketed for weather tight operation using a 'U' channel molded silicone rubber gasket.

**Electrical:** 18W LED luminaire, 20.5 total system watts,  $-40^{\circ}\text{C}$  start temperature. Integral 120V through 277V electronic LED driver, 0-10V dimming. LED module(s) are available from factory for easy replacement. Standard LED color temperature is 3000K with an 85 CRI. Available in 4000K (85 CRI); add suffix K4 to order.

**Notes:** LEDs supplied with luminaire. Due to the dynamic nature of LED technology, LED luminaire data on this sheet is subject to change at the discretion of BEGA-US. For the most current technical data, please refer to [www.bega-us.com](http://www.bega-us.com).

**Finish:** All BEGA standard finishes are polyester powder coat with minimum 3 mil thickness. Available in four standard BEGA colors: Black (BLK); White (WHT); Bronze (BRZ); Silver (SLV). To specify, add appropriate suffix to catalog number. Custom colors supplied on special order.

**CSA** certified to U.S. and Canadian standards for wet locations. Protection class IP65

**Weight:** 7.3 lbs

**Luminaire Lumens:** 803

Tested in accordance with LM-79-08

### Mounting options:

**79547** Surface-mount wiring box

These luminaires mount over a custom BEGA recessed box. This box can be shipped ahead of the luminaire.

**Narrow beam upwards or downwards**

### Footnotes

- Not available with **HS** option.
- SMA** or **SMB** adaptors is required for this option.
- Not available 347-480 volt.
- Luminaire option **RC**, **RCD** or **RCD7** is required with this options.
- Use of photoelectric cell or shorting cap is required to ensure proper illumination.
- Globe Material **ACDR** is required with this optical system.
- Only 3 pin receptacle **RC** is available with **SMA** adaptor.

## Urban luminaire

### Dimensions

EPA: 1.35 ft² max.

Weight: 42 lbs (19.1kg) max.

**DMS50 - A optics**  
Long drop globe

**DMS50 - S optics**  
Sag lens

**DMS50 - F optics**  
Flat lens

### Predicted Lumen Depreciation Data

Predicted performance derived from LED manufacturer's data and engineering design estimates, based on IESNA LM-80 methodology. Actual experience may vary due to field application conditions. L<sub>70</sub> is the predicted time when LED performance depreciates to 70% of initial lumen output. Calculated per IESNA TM21-11. Published L<sub>70</sub> hours limited to 6 times actual LED test hours.

| Ambient Temperature °C | Driver mA | Calculated L <sub>70</sub> Hours | L <sub>70</sub> per TM-21 | Lumen Maintenance % at 60,000 hrs |
|------------------------|-----------|----------------------------------|---------------------------|-----------------------------------|
| 35°C                   | 700 mA    | >100,000 hours                   | >60,000 hours             | >86%                              |

1. System input wattage may vary based on input voltage, by up to +/- 10%, and based on manufacturer forward voltage, by up to +/- 8%.

2. Lumen values based on photometric tests performed in compliance with IESNA LM-79.

**Note:** Some data may be scaled based on tests of similar, but not identical, luminaires.

1. System input wattage may vary based on input voltage, by up to +/- 10%, and based on manufacturer forward voltage, by up to +/- 8%.

2. Lumen values based on photometric tests performed in compliance with IESNA LM-79.

**Note:** Some data may be scaled based on tests of similar, but not identical, luminaires.

1. System input wattage may vary based on input voltage, by up to +/- 10%, and based on manufacturer forward voltage, by up to +/- 8%.

2. Lumen values based on photometric tests performed in compliance with IESNA LM-79.

**Note:** Some data may be scaled based on tests of similar, but not identical, luminaires.

### Specifications:

#### Housing

In a round shape, this housing is made of die cast A380 aluminum, c/w a watertight grommet, mechanically assembled to the bracket with four bolts 5/16 18 UNC. This suspension system permits for a full rotation of the luminaire in 90° increments.

#### Access-mechanism

A die cast A360 aluminum technical ring with latch, hinge and a cast in decorative skirt. The mechanism shall offer tool free access to the inside of the luminaire. An embedded memory retentive gasket shall ensure weatherproofing.

#### Light engine

LEDgine composed of 5 main components:

**Heat Sink / Lens / LED lamp / Driver / Optical System**

Electrical components are RoHS compliant.

#### LED engine

LED type: Philips Lumileds LUXEON T. Composed of high-performance white LEDs. Color temperature as per ANSI/NEMA bin Neutral White, 4000 Kelvin nominal (3985K +/- 275K or 3710K to 4260K) or Warm white, 3000 Kelvin nominal (3045K +/- 175K or 2870K to 3220K), CRI 70 Min. 75 Typical.

#### Lens

**LExF / LExS:** Made of soda lime tempered glass lens, mechanically assembled and sealed onto the lower part of the heat sink.

**LExA (Globe):** Made of one-piece seamless injection-molded impact-resistant (DR) acrylic having an inner prismatic surface. The globe is mechanically assembled and sealed onto the lower part of the heat sink.

#### Heat sink

Made of cast aluminum optimizing the LEDs efficiency and life. Product does not use any cooling device with moving parts (only passive cooling device).

#### Driver

Driver comes standard with dimming compatible 0-10V. High power factor of 95%. Electronic driver, operating range 50/60 Hz. Auto adjusting universal voltage input from 120 to 277 VAC rated for both application line to line or line to neutral, Class I, THD of 20% max. Maximum ambient operating temperature from 40F(40C) to 130F(55C) degrees. Certified in compliance to UL1310 cULus requirement. Dry and damp location. Assembled on a unitized removable tray with Tyco quick disconnect plug resisting to 221F(105C) degrees. The current supplying the LEDs will be reduced

by the driver if the driver experiences internal overheating as a protection to the LEDs and the electrical components. Output is protected from short circuits, voltage overload and current overload. Automatic recovery after correction. Standard built in driver surge protection of 2.5kV (min).

#### Optical system

Composed of high performance optical grade PMMA acrylic refractor lenses to achieve desired distribution optimized to get maximum spacing, target lumens and a superior lighting uniformity. Optical system is rated IP66. Performance shall be tested per LM 63, LM 79 and TM 15 (IESNA) certifying its photometric performance. Street side indicated. Flat lens (F optics) is Dark Sky compliant with 0% uplight and U0 per IESNA TM 15.

# DMS50 Domus LED pendant

## Urban luminaire

### Specifications (continued):

#### Optical system (continued):

**Prismatic globe:** IP66 rated optical system, composed of individual pre-oriented lens to achieve desired distribution, assembled with globe having an inner prismatic surface permanently sealed onto the lower part of the heat sink.

**LE2A** - Type II (ASYM) with globe (ACDR)  
**LE3A** - Type III (ASYM) with globe (ACDR)  
**LE4A** - Type IV (ASYM) with globe (ACDR)

**Sag lens:** IP66 rated optical system, composed of individual pre-oriented lens to achieve desired distribution, assembled with a tempered-glass sag lens permanently sealed onto the lower part of the heat sink.

**LE2S** - Type II (ASYM) Sag glass lens  
**LE3S** - Type III (ASYM) Sag glass lens  
**LE4S** - Type IV (ASYM) Sag glass lens  
**LE5S** - Type V (SYMM) Sag glass lens

**Flat lens:** IP66 rated optical system, composed of individual pre-oriented lens to achieve desired distribution, assembled with a tempered-glass flat lens permanently sealed onto the lower part of the heat sink.

**LE2F** - Type II (ASYM) Flat glass lens  
**LE3F** - Type III (ASYM) Flat glass lens  
**LE4F** - Type IV (ASYM) Flat glass lens  
**LE5F** - Type V (SYMM) Flat glass lens

#### Driver options

**AST:** Pre-set driver for progressive start-up of the LED module(s) to optimize energy management and enhance visual comfort at start-up.

**CLO:** Pre-set driver to manage the lumen depreciation by adjusting the power given to the LEDs offering the same lighting intensity during the entire lifespan of the LED module.

**DALI:** Pre-set driver compatible with the DALI control system.

**OTL:** Pre-set driver to signal end of life of the LED module(s) for better fixture management.

**DMG:** Dimmable driver 0-10V.

**CDMG:** Dynadimmer standard dimming functionalities including pre-programmed scenarios to suit many applications and needs from safety to maximum energy savings.

| Ordering Code | Scenario | Dimming Time | Dimming Level     |
|---------------|----------|--------------|-------------------|
| CDMG525       | Safety   | 4 hours      | 25% power dimming |
| CDMG550       | Safety   | 4 hours      | 50% power dimming |
| CDMG575       | Safety   | 4 hours      | 75% power dimming |
| CDMG25        | Median   | 6 hours      | 25% power dimming |
| CDMG50        | Median   | 6 hours      | 50% power dimming |
| CDMG75        | Median   | 6 hours      | 75% power dimming |
| CDMGE25       | Economy  | 8 hours      | 25% power dimming |
| CDMGE50       | Economy  | 8 hours      | 50% power dimming |
| CDMGE75       | Economy  | 8 hours      | 75% power dimming |

#### Surge protector

Surge protector tested in accordance with ANSI/IEEE C62.45 per ANSI/IEEE C62.41.2 Scenario I Category C High Exposure 10kV/10kA waveforms for Line Ground, Line Neutral and Neutral Ground, and in accordance with U.S. DOE (Department of Energy) MSSLC (Municipal Solid State Street Lighting Consortium) model specification for LED roadway luminaires electrical immunity requirements for High Test Level 10kV / 10kA. **SP2** 20kV/20kA optional.

#### Luminaire adaptor

**MA1:** The luminaire is suspended by means of a mounting adaptor with a 1¼" (32mm) NPT threaded hole accepting a threaded tube from the mounting. Retrofit adaptor for existing mounting.

**MA2:** 1½" (38mm) NPT threaded hole accepting threaded tube from the mounting. Retrofit adaptor for existing mounting.

**SMA:** The luminaire is suspended by means of a decorative side-mounted cast aluminum adaptor. This adaptor accepts tubes from 1½" to 2¾" (41 to 60mm) and is adjustable to more or less 5°. The adaptor features a cast aluminum decorative cover and finial.

**SMB:** The luminaire is suspended by means of a decorative side-mounted cast aluminum adaptor. This adaptor accepts tubes from 1½" to 2¾" (41 to 60mm) and is adjustable to more or less 5°.

#### Finish

In accordance with the AAMA 2603 standard. Application of polyester powder coat paint (4 mils/100 microns) with +/- 1 mils/24 microns of tolerance. The Thermosetting resins provides a discoloration resistant finish in accordance with the ASTM D2244 standard, as well as luster retention in keeping with the ASTM D523 standard and humidity proof in accordance with the ASTM D2247 standard. The surface treatment achieves a minimum of 2000 hours for salt spray resistant finish in accordance with testing performed and per ASTM B117 standard.

##### Finish Options Include:

**BE2TX:** Textured Midnight Blue  
**BE6TX:** Textured Ocean Blue  
**BE8TX:** Textured Royal Blue  
**BG2TX:** Textured Sandstone  
**BKTX:** Textured Black  
**BRTX:** Textured Bronze  
**GN4TX:** Textured Blue Green  
**GN6TX:** Textured Forest Green  
**GN8TX:** Textured Dark Forest Green  
**GNTX:** Textured Green  
**GR:** Gray Sandtex  
**GY3TX:** Textured Medium Grey  
**NP:** Natural Aluminum  
**RD2TX:** Textured Burgundy  
**RD4TX:** Textured Scarlet  
**TG:** Hammer-tone Gold  
**WHTX:** Textured White

#### Wiring

Gauge (#14) TEW/AWM 1015 or 1230 wires, 6" (152mm) minimum exceeding from luminaire.

#### Hardware

All exposed screws shall be complete with Ceramic primer-seal base coat to reduce seizing of the parts and offers a high resistance to corrosion. All seals and sealing devices are made and/or lined with EPDM and/or silicone and/or rubber.

#### Luminaire useful life

Refer to IES files for energy consumption and delivered lumens for each option. Based on ISTMT in situ thermal testing in accordance with UL1598 and UL8750, Philips System Reliability Tool, Philips Advance data and Philips Lumileds LM-80/TM-21 data, expected to reach 100,000+ hours with >L70 lumen maintenance @ 25°C. Luminaire Useful Life accounts for LED lumen maintenance AND all of these additional factors including: LED life, driver life, PCB substrate, solder joints, on/off cycles, burning hours and corrosion. Entire luminaire is rated for operation in ambient temperature of -40°C / -40°F up to +35°C / +95°F.

#### LED products (manufacturing standard)

The electronic components sensitive to electrostatic discharge (ESD) such as light emitting diodes (LEDs) are assembled in compliance with IEC61340 5 1 and ANSI/ESD S20.20 standards so as to eliminate ESD events that could decrease the useful life of the product.

#### Quality control

Manufactured to ISO 9001 2008 standards and ISO 14001-2004 International Quality Standards Certification.

#### Vibration resistance

Meets the ANSI C136.31, American National Standard for Roadway Luminaire Vibration specifications for Bridge/overpass applications. (Tested for 3G over 100 000 cycles)

#### Certifications and Compliance

CSA, cULus Listed for Canada and USA. Domus LED luminaires are DesignLights Consortium qualified.

## BURLINGTON CITY CENTER PHASE I OCCUPANCY SCHEDULE

The occupancy of Burlington City Center will occur in a logical manner based on current and future anticipated market conditions and the extension of infrastructure. This occupancy is anticipated to occur in multiple phases between March 2019 through June 2020.

The project is organized into three main parts – 1) a five-story mixed-use podium, 2) a six-story office tower and 3) an eight-story residential tower with the lower two floors containing office occupancy. Occupancy will follow the general construction sequence for the project.

The first phase of occupancy will include the retail space along Cherry and Bank streets, two levels of office space (UVMCC) in the residential tower, and the lower two levels of the parking garage. To support this phase of occupancy, the Cherry St. and Bank St. public improvements will be completed including the access to the parking garage and loading dock. It is anticipated that occupancy will occur on March 1, 2019.

The second phase of occupancy will include the collegiate housing located in the east wing of the residential tower, 103 units, the “wrap” housing that encloses the parking garage on two sides, 61 units, the office tower and the remaining two levels of the parking garage. It is anticipated that occupancy will occur on December 31, 2019.

The final phase of occupancy will include the retail space along St. Paul and Pine streets and the remaining residential tower units, 109 units. This will be supported by the opening of the new St. Paul St. and Pine St. It is anticipated that occupancy will occur on May 1, 2020.

A summary of the anticipated occupancy schedule is below:

### 1<sup>st</sup> Phase of Occupancy

|                                      |          |
|--------------------------------------|----------|
| UVMCC Office Space                   | 3/1/2019 |
| Parking Garage   Levels P + L2       | 3/1/2019 |
| Cherry St. + Bank St. Improvements   | 3/1/2019 |
| Retail Space   Bank + Cherry Facades | 3/1/2019 |

### 2<sup>nd</sup> Phase of Occupancy

|                                            |            |           |
|--------------------------------------------|------------|-----------|
| Residential Tower – East Wing (Collegiate) | 12/31/2019 | 103 Units |
| Residential Housing (Parking Garage Wrap)  | 12/31/2019 | 61 Units  |
| Office Tower                               | 12/31/2019 |           |
| Parking Garage   Levels L3 + L4            | 12/31/2019 |           |

### 3<sup>rd</sup> Phase of Occupancy

|                                            |          |           |
|--------------------------------------------|----------|-----------|
| Residential Tower – Center + West Wings    | 5/1/2020 | 109 Units |
| Retail Space   St. Paul + Pine St. Facades | 5/1/2020 |           |
| St. Paul St. + Pine St. Improvements       | 5/1/2020 |           |

## Memorandum

To: Devonwood Investors, LLC

Date: December 13, 2016

Project #: 57881.00

From: Jason Ross, Director of Noise and  
Vibration

Re: Noise Impact Assessment for Burlington Town Center

## Introduction

VHB has conducted a noise assessment of the proposed Burlington Town Center multi-use development project in Burlington, VT. The development has the potential to introduce new stationary and mobile sources of noise that could potentially affect the existing community. The development would introduce new stationary sources including rooftop mechanical equipment and outdoor use of a rooftop park. Increased retail, office, residential and preschool space would generate vehicle trips that have the potential to increase traffic noise. This noise impact memo provides background on the proposed development, describes applicable noise impact criteria and qualitatively assesses the potential for impact.

## Background

The proposed project would include demolishing the existing Town Center Mall and construction of a mixed-use development including office, residential, preschool, retail and parking. The building would be fourteen stories tall (approximately 158 feet) with mechanical equipment enclosed on the rooftop level. The development will include uses similar to the existing uses on site. Retail spaces would generally be on the concourse, first and second floors, parking would be on the third, fourth and fifth floors, an outdoor tenant park would be on the fifth floor (fourth floor roof), office space would be on the third to tenth floors and residential space would be on the seventh to 14<sup>th</sup> floors.

## Noise Ordinance

There are no federal or state-level noise regulations in Vermont that apply to evaluate potential noise effects due to the proposed development. Additionally, the project is not subject to environmental review pursuant to the Act 250 program administered by the Natural Resources Board.

The Burlington Noise Code (Section 21-13) "Noise Ordinance" is intended to preserve the public health, safety and welfare by prohibiting excessive and disturbing noise. Specific noise-generating activities are prohibited including the following that may be applicable to the proposed development:

- making "loud or unreasonable" noise which disturbs, injures or endangers the peace or health of another;
- operating radios, television, musical instruments or similar devices that is plainly audible from another property or from the street between the hours of 10:00 PM and 7:00 AM;
- parties and social events that generate unreasonably loud noise or is plainly audible between the hours of 10:00 PM and 7:00 AM at another property or at the street;
- construction activities between 9:00 PM and 7:00 AM; and
- use of loudspeakers for the purpose of attracting the attention of the public to a building.

December 13, 2016  
Page 2

## Noise Impact Assessment

The development will include retail and office uses similar in nature and character to existing uses on the site and on abutting parcels typical of the downtown. Noise-sensitive receptors near the proposed development include retail and residential buildings on Bank Street to the south, retail properties to the east and west and residences and the Cathedral of the Immaculate Conception to the north.

The project would not be expected to include specific noise-generating activities which are prohibited according to the Noise Code such as making loud or unreasonable noise, operating radios, televisions, musical instruments or similar devices that could be audible from other properties or the street, and parties or social events that generate plainly audible noise between 10:00 PM and 7:00 AM.

Parking, loading docks and trash and recycling facilities will be located within the building which would improve current conditions. The outdoor fifth floor tenant park will only be accessible to office tenants and the pre-kindergarten program during normal business hours which would be outside the hours of 10:00PM and 7:00 AM when loud and unreasonable events are prohibited.

Specific details including location, types and sizes of stationary mechanical equipment such as condenser units and generators are not known at this time. Standard mechanical equipment will be located on the building roofs and would likely be enclosed which would substantially reduce noise to the community.

As described in the Traffic Impact Study, the proposed development would increase traffic volumes in the area up to 4% on major gateways such as North Avenue, Route 127, Colchester Avenue, Pine Street, Shelburne Road (US 7) and Main Street (US 2) during the peak afternoon hour. Vehicle trips generated by the development would be primarily automobiles based on the retail, office and residential uses of the property. This increase in traffic volumes would result in a negligible (less than 0.2 dB) increase in noise due to additional mobile sources.

Construction of the proposed development would involve equipment and methods typical of mixed-use development projects in the region. As feasible, construction of the proposed facility would not occur during the hours of 9:00 PM and 7:00 AM which is prohibited according to the town ordinance.

## Conclusions

The proposed development would not result in adverse noise impact according to the Burlington Noise Ordinance as it relates to the introduction of new stationary sources including rooftop mechanical equipment, increases in traffic volumes due to the additional retail, office and residential uses or construction-period activities.

### **DUST MITIGATION & CONTROL MEASURES**

PC Construction takes dust control seriously on all its project sites and recognizes the City of Burlington's concern about controlling dust during the entirety of the project. As such, the following dust control measures are proposed:

- During dry conditions, soil disturbance areas will be visually monitored by onsite PC Construction supervision / personnel that are experienced in proactively identifying areas needing dust control before visible dust is generated. When such areas are identified, the contractor will preemptively employ appropriate dust mitigation measures/practices. It will be the responsibility of the contractor and applicable subcontractors to perform the dust mitigation measures.
- Dust mitigation will be addressed via the use of calcium chloride amended water that will be applied to roadways, access corridors, soil excavation areas, demolition areas, soil stockpiles, and/or other areas where dust may be generated; however, care will be taken not to produce a condition where runoff results. Water will be applied to potential areas of concern via industrial fan misters, sprinklers, water trucks, and/or other similar methods.
- Should visible dust be observed, work will temporarily cease until adequate water application is achieved and no visible dust is being generated. In addition to water application, other dust mitigation practices may be employed during windy, dry conditions when dust is most likely to be generated. These additional practices will include reduction of truck traffic speeds and a general increased level of care during excavation and soil loading activities (e.g. place bucket of soil as opposed to dumping it from some height). As part of the design plan, an Erosion Prevention and Sediment Control Plan will be prepared which will further address dust mitigation measures.

Heavy equipment will be utilized for demolition of structures, processing of debris and haulage of said material, as well as movement of vehicles at the work site, and movement of demolition materials.

- Dust control will be provided by routine spraying and dependent upon weather conditions at the time, i.e., wind, temperature, use of haul roads, type of debris being processed) with water trucks or fire hoses.

The following locations are the main areas of work for the project and may or may not generate dust:

- Lay-down area
- Foot print of the work area
- Processing of debris
- Equipment travel path
- Mobilization and De-mobilization of equipment
- Demolition of structures and foundations

## **10.0 APPENDIX – DOWNTOWN MIXED USE CORE OVERLAY COMPLIANCE CHECKLIST**

Instructions:

The Downtown Mixed Use Core Overlay Compliance Checklist is a tool to be use for documentation and confirmation of compliance with the requirements of Sec. 4.5.8 Downtown Mixed Use Core Overlay (DMUC) District. This checklist documents compliance **only** with the requirements of Sec. 4.5.8. Other sections of the CDO as applicable (e.g. Art 8 Parking, Art 9 Inclusionary and Replacement Housing) also require documentation of compliance.

The ordinance requirements listed in the first column are in some cases **only a summary** of the requirements found in the CDO. Any questions or conflicts should refer back to the CDO itself for clarification. The Applicant Compliance Documentation should be as brief as necessary to convey how compliance with the requirements have been achieved, and should reference related plans and illustrations as appropriate.

| Ordinance Requirement (summarized)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Applicant Compliance Documentation                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Staff Compliance Confirmation                                                                                           |

| <p>The Downtown Mixed Use Core Overlay (DMUC) district is intended to facilitate the redevelopment of a portion of the former Urban Renewal Area in order to provide for a more walkable, connected, dense, compact, mixed use and diverse urban center. The area should support a diversity of residential, commercial, recreational, educational, civic, hospitality, and entertainment activities, and create opportunities to better connect the street grid for enhanced mobility for automobiles, pedestrians, and bicyclists in order to sustain and advance the economic vitality Burlington’s downtown urban core.</p> <p>This overlay allows larger scale development than is typically found in the underlying district, and development with larger and taller buildings. Development should be designed to support the diverse mixed-uses, activate and enrich the street and sidewalk for pedestrian activity, and encourage mobility throughout the district and adjacent districts for pedestrians and bicyclists with reduced reliance on automobiles.</p> | <p>The proposed development is a multi-use project within the Downtown Mixed Use Core Overlay (DMUC) District on the project site presently occupied by Burlington Town Center Mall at 49 Church Street. The proposed uses include retail, residential, office, and parking.</p> <p>Two of the project parcels will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul’s Street, between Cherry and Bank Streets.</p> | <p><input type="checkbox"/> In compliance<br/><input type="checkbox"/> Not in compliance</p> <p><u>Explanation:</u></p> |

| B. <b>Façade Articulation:</b> All street-facing Building facades shall be articulated as follows:                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                        |
| i. Building facades shall incorporate at least three (3) methods of surface relief which must either recess or project from the average plane of the facade by at least four (4) inches.                                                                                                                                                                                                                                                                           | See Project Narrative section 2.4, drawing A-201, and A-202 Building Elevations.<br>1.) Top of Building 6” cornice.<br>2.) 18” offset at corner of brick façade.<br>3.) 4” setback at glazing.<br>4.) Spandrel Panel projects 4” from face of glazing.<br>5.) Bay window 18” projection.<br>6.) 42” Recessed Balcony.<br>7.) Vertical articulation 9” projection.<br>8.) 10’-0” Recessed building entry.<br>9.) Storefront awning and entrance canopy. | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |
| ii. Buildings with facades between 75-150 feet in width shall include vertical changes through the horizontal plane of the Façade by dividing the facade into a series of architectural and/or structural bays between 6-65 feet in width involving up to a minimum of 50% of the height of the façade.                                                                                                                                                            | See drawings A-201 and A-202 Building Elevations.<br>Structural bays are provided running the entire height of building facades. Widths of bays varies, typically from 18’-0” min to 28’-0” max.                                                                                                                                                                                                                                                       | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| iii. Buildings with facades greater than 150 feet in width must include a more substantial change in the horizontal plane of the façade where for every 150 feet in facade width, 1 or more architectural bay as required above must either recess or project by at least 4 feet involving the full height of the façade from the average plane of the street wall portion of the facade. Such bays shall occur no closer than 50 feet from the Building’s corner. | See drawings A-201 and A-202 Building Elevations.<br>Facades exceed 150’-0” in length and include differentials massing and setbacks above street wall façade. Recessed entryways are set in 10’-0” from the main façade and continue to the upper stories to create vertical expression.                                                                                                                                                              | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| iv. Required Building Height Setbacks pursuant to Sec 4.4.1 (d) 4 shall not be applicable. Instead, upper stories of any street-facing Building facade exceeding 6 stories in height shall be setback as follows:                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                        |
| a. An upper story setback at least 10 feet from the primary plane of the façade below shall occur within the first 60-ft of Building height at either the 3rd, 4th, or 5th story. Such a change shall involve the full width of the Building façade, but does not have to occur in the same story.                                                                                                                                                                 | See drawing Z-021 Zoning Sections.<br>A 10’-0” setback is provided at the 5 <sup>th</sup> floor of the North Tower and the 6 <sup>th</sup> floor of the South Tower, both within 60’-0” from average grade.                                                                                                                                                                                                                                            | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| b. For Buildings exceeding 10 stories in height a second upper story setback at least ten (10) feet from the primary plane of the façade below shall occur at either the 10th, 11th, or 12th story. Such a change shall involve the full width of the Building façade, but does not have to occur in the same story.                                                                                                                                               | See drawing Z-021 Zoning Sections.<br>A 10’-0” setback is provided at the 10th floor of the South Tower. The North Tower has multiple setbacks of at least 10’-0” at either the 7 <sup>th</sup> floor, 11 <sup>th</sup> floor, or 12 <sup>th</sup> floor.                                                                                                                                                                                              | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |

| Ordinance Requirement (summarized)                                                                                                                                                                                                                                                                                                       | Applicant Compliance Documentation                                                                                                                                                                                                                                                                        | Staff Compliance Confirmation                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| c. Setbacks must be visually set off from the stories below by a balustrade, parapet, cornice and/or similar architectural feature, and are encouraged to be activated as an outdoor amenity space for Building occupants.                                                                                                               | See drawing Z-021 Zoning Sections; A-051, A-052, & A-053 Floor Plans; and A-201 and A-202 Building Elevations.<br><br>Setbacks are visually offset from stories below by material changes and in some places railings. The setbacks provided are activated as outdoor amenities for tenants and visitors. | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| d. The upper stories beyond a setback may be visually differentiated from the stories below by a change in color, materials and/or pattern of fenestration in order to reduce the actual or perceived massing of the Building overall.                                                                                                   | See drawings A-201 and A-202 Building Elevations.<br><br>Setbacks are visually offset from stories below by material changes and fenestration patterns.                                                                                                                                                   | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| v. Where visible, the raised foundation or basement of a Building shall not exceed 4-ft as measured from the exterior finished grade to the finished floor of the Story above, and must be visually differentiated from the stories above by a horizontal expression line and change in color, material, and/or pattern of fenestration; | Not Applicable.                                                                                                                                                                                                                                                                                           | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| vi. The lower 1-5 stories of a Building must be visually differentiated from the stories above by a horizontal expression across a majority of the facade; and,                                                                                                                                                                          | See drawings A-201 and A-202 Building Elevations.<br><br>The streetwall façade extends from grade to the 5 <sup>th</sup> floor North Tower/6 <sup>th</sup> floor South Tower, which provides a horizontal expression across the majority of the façade.                                                   | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |
| vii. The top 1-5 stories of a Building must be visually differentiated from the stories below by a horizontal expression across a majority of the façade                                                                                                                                                                                 | See drawings A-201 and A-202 Building Elevations.<br><br>The massing of the upper stories is broken up, and higher setbacks are provided, articulating horizontal expression at each massing.                                                                                                             | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |
| viii. The top of a Building must have an expression of the Buildings top involving a projection from the average plane of the facade by at least 6 inches.                                                                                                                                                                               | See drawings A-201 and A-202 Building Elevations.<br><br>The South Tower Mechanical level roof projects +/- <b>18”</b> over the outdoor setback below.<br><br>The North Tower provides a 6” stone projection at the roof level.                                                                           | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |

| Ordinance Requirement (summarized)                                                                                                                                                                                                                                                                                                                                                                                    | Applicant Compliance Documentation                                                                                                                                                                                                                                                                                                                                                                                                                                             | Staff Compliance Confirmation                                                                               |

| <div>v. Street-facing, street-level windows must allow views into a ground story non-residential use for a depth of at least 3 feet for the first 4 feet above the level of the finished sidewalk in order to provide for a window display, and for a depth of at least 8 feet for the next 4 feet above the level of the finished sidewalk in order to provide a view into the interior of the space. Windows cannot be made opaque by window treatments (except operable sunscreen devices within the conditioned space). External security shutters are not permitted.</div>                                                                                                                       | <div>See Project Narrative section 2.6 and drawings A-201 and A-202 Building Elevations.</div> <div>All Street level windows allow views into the ground story as per regulations.</div>                                                                                                  | <div><input type="checkbox"/> In compliance</div> <div><input type="checkbox"/> Not in compliance</div> <div>Explanation:</div> |
| <div>vi. In addition to the restriction regarding ground floor residential uses pursuant to Sec. 4.4.1, (d) 1 A, General Office uses shall also not be permitted on the ground floor of any building in the DMUC Overlay.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <div>See Project Narrative section 2.6 and drawing A-051 Floor Plans.</div> <div>General office use is not provided at ground floor.</div>                                                                                                                                                | <div><input type="checkbox"/> In compliance</div> <div><input type="checkbox"/> Not in compliance</div> <div>Explanation:</div> |
| <div>3.) Materials:</div> <div>The following requirements regarding the selection and use of Building materials is intended to improve the physical quality and durability of buildings, enhance the pedestrian experience, and protect the character of the downtown area.</div>                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                           |                                                                                                                                 |
| <div>i. Primary Materials: Not less than 80 percent of each street-facing Facade shall be constructed of primary materials comprised of high quality, durable, and natural materials. For Facades over 100 square feet, more than one primary material shall be used. Changes between primary materials must occur only at inside corners. The following are considered acceptable primary materials:</div> <div>a. Brick and tile masonry;</div> <div>b. Native stone;</div> <div>c. Wood – panels, clapboard or shingles;</div> <div>d. Glass curtain wall; and,</div> <div>e. Cementitious siding;</div>                                                                                           | <div>See Project Narrative section 2.4 Proposed Exterior Finish Materials Table and drawings A-201 and A-202 Building Elevations. Also see FIGURES 4-A through 4-D.</div> <div>Primary materials consist of Brick-Faced Panels, Limestone Finished Panels, Glazing, and Stone Base.</div> | <div><input type="checkbox"/> In compliance</div> <div><input type="checkbox"/> Not in compliance</div> <div>Explanation:</div> |
| <div>ii. Accent Materials: The following accent materials may make up no more than 20% of the surface area on each street-facing façade. Accent materials are limited to:</div> <div>a. Pre-cast masonry (for trim and cornice elements only);</div> <div>b. External Insulation Finishing System - EIFS (for upper story trim and cornice elements only);</div> <div>c. Gypsum Reinforced Fiber Concrete (GFRC—for trim elements only);</div> <div>d. Metal (for beams, lintels, trim elements and ornamentation, and exterior architectural metal panels and cladding only);</div> <div>e. Split-faced block (for piers, foundation walls and chimneys only); and.</div> <div>f. Glass block.</div> | <div>See Project Narrative section 2.4 and drawings A-201 and A-202 Building Elevations. See FIGURE 4-E.</div> <div>Accent materials consist of Metal Panels.</div>                                                                                                                       | <div><input type="checkbox"/> In compliance</div> <div><input type="checkbox"/> Not in compliance</div> <div>Explanation:</div> |

| Ordinance Requirement (summarized)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Applicant Compliance Documentation | Staff Compliance Confirmation                                                                                                                                                  |

Vehicular entrances to parking structures shall not exceed 24-ft clear width and 16-ft clear height at the street frontage.                                                                                                                                                                                                                                                                                                                                                                           | See drawings A-201 and A-202 Building Elevations.<br><br>Vehicular parking access is provided on both Cherry and Bank Streets and does not exceed 24’-0” width and 16’-0” height.                                                                                                                                                                                                                                                                                     | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| iv. At least one pedestrian route from all parking structures shall lead directly to a street frontage (i.e., not directly into a Building). When portions of a building containing parking front on more than one street, multiple pedestrian routes to street frontage is strongly encouraged.                                                                                                                                                                                                           | See Project Narrative section 2.8 and drawing A-051 Floor Plans.<br><br>Pedestrian access to parking area is provided at Cherry, Pine, and St. Paul Streets.                                                                                                                                                                                                                                                                                                          | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |

| Ordinance Requirement (summarized)                                                                                                                                                                                                                                                                                                                                                      | Applicant Compliance Documentation                                                                                                                                                                                                                                            | Staff Compliance Confirmation                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| v. All structured parking with frontage on any portion of a public street shall be treated as follows:                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                               | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> Applicable                                                                         |
| a. The required setback between the parking and the public street at the ground level must be occupied by an active use (such as, but not limited to, residential lobby, retail, office, recreational or services). This requirement shall not apply to parking located either entirely below-grade or above the second floor where parking may extend out to the building’s perimeter. | Parking is located above the second floor.                                                                                                                                                                                                                                    | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |
| b. All floors of a parking structure fronting a public street must be level (not inclined), and any sloped ramps between parking levels must be setback a minimum of 20-ft from the street-facing building façade and shall not be discernible along the perimeter of the parking structure.                                                                                            | See drawings A-051 and A-052 Floor Plans.<br>Parking floors are level and sloped ramps will not be discernible along the perimeter of the structure.                                                                                                                          | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |
| c. Where upper stories of structured parking are located at the perimeter of a building, parked vehicles, vehicle headlights and interior lighting shall be screened from view from the street and adjacent properties.                                                                                                                                                                 | See Project Narrative 2.8, drawings A-201, and A-202 Building Elevations.<br>At St. Paul and Pine Streets vehicle headlights are visually screened from view with glazed panels. Interior lighting shall be screened from view by interior valances set back from the façade. | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |
| d. In addition to the Urban Design Standards required above, facade treatments (materials, fenestration patterns, and architectural detailing) must be continued on stories containing parking in a manner consistent with the overall architectural design of the Building and such that levels of parking are not clearly distinguishable from other uses in a building.              | See Project Narrative 2.8, drawings A-201, and A-202 Building Elevations.<br>Parking areas are screened from public view with building façade elements consistent with the scale and materials of the overall development.                                                    | <input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u>                                            |
| vi. Each parking space provided in an underground parking structure may be counted as 1.75 of the parking spaces as required in Art 8.                                                                                                                                                                                                                                                  | Not applicable.                                                                                                                                                                                                                                                               | <input type="checkbox"/> Not applicable<br><input type="checkbox"/> In compliance<br><input type="checkbox"/> Not in compliance<br><u>Explanation:</u> |

## Appendices

APPENDIX A: Traffic Volume Data

APPENDIX B: Crash Data

APPENDIX C: Adjustment Factors (Seasonal / DHV and Growth)

APPENDIX D: Trip Generation Calculations

APPENDIX E: Supporting Traffic Volume Networks

APPENDIX F: Signalized Intersection Capacity Analyses

APPENDIX G: Unsignalized Intersection Capacity Analyses

## 1. Introduction

Devonwood Investors, LLC proposes to develop a multi-use project (Burlington Town Center) within the Downtown Mixed Use Core Overlay (DMUC) District on the project site presently occupied by Burlington Town Center Mall at 49 Church Street. The site is currently spread across six parcels of land, and will be reconfigured into five, two of which will be turned over to the City of Burlington for use as new public through-street extensions of Pine Street and St. Paul's Street, between Cherry and Bank Streets.

VHB has completed a Traffic Impact Study (TIS) for the proposed Burlington Town Center redevelopment which includes demolishing the existing Town Center Mall between St. Paul Street and Pine Street and constructing a mixed-use town center that includes approximately 965,352 square feet of parking, office, residential, and retail uses.

This Traffic Impact Study includes the following elements:

- A description of the existing transportation network in the vicinity of the site;
- A summary of the crash data within the study area;
- A description of the proposed development program;
- A trip generation estimate for the proposed development program;
- An evaluation of traffic operations at eighteen intersections within the study area; and
- Conclusions and recommendations to support the project.

This report was developed to address the following Major Impact Review Standard, as outlined in the City of Burlington's *Comprehensive Development Ordinance* (Section 3.5.6(b)):

- *Criteria #5: The proposed development shall not cause unreasonable congestion or unsafe conditions on highways, streets, waterways, railways, bikeways, pedestrian pathways or other means of transportation, existing or proposed.*

 Page 2

As part of this study, a total of 18 intersections were evaluated and summarized in regards to level of service (LOS) and delay in order to estimate how the proposed project impacts the local street network. Additional reviews and evaluations are contained within this report which summarize the existing and proposed project area as it relates to traffic and safety impacts. The general project area and traffic study intersections are shown below in **Figure 1**.

**Figure 1: Project Location and Study Intersections**

## 2. Existing Conditions

The project site is bounded by Cherry Street to the north, St. Paul Street to the east, Bank Street to the south, and Pine Street to the west. The existing Burlington Town Center Mall consists of approximately 170,000 square feet of commercial space on two floors, comprised of national, regional, and local retailers. The proposed project will involve a redevelopment of a portion of the existing mall between St. Paul Street and Pine Street, with the existing mall stores between St. Paul Street and Church Street remaining largely unchanged.

The downtown intersections being evaluated for this project were identified based on input from City staff and generally include the major intersections in the vicinity of the project which are anticipated to receive at least 75 trips during the peak hour (per VTrans *Traffic Impact Study Guidelines*). Table 1 provides a summary of the intersection control type and lane configurations at the eighteen intersections being evaluated as part of this project.

### 3. Crash Summary

VTrans evaluates reported crash data and identifies High Crash Location (HCL) intersections and sections that have a minimum of five reported crashes in five years, and have an actual-to-critical ratio greater than 1.0. The actual-to-critical ratio compares the actual crash rate at a given location to a critical crash rate calculated for similar facilities statewide. A review of VTrans' most recent HCL Report (2010 – 2014)<sup>1</sup> revealed that eight intersections and two sections within the study area are HCLs. These HCLs are summarized in Table 2 below.

**Table 2: High Crash Location Intersections within Project Area**

| HCL #                | Location                      | Mile Marker   | Total Crashes | Fatalities | Injuries | Actual/<br>Critical Ratio |
|----------------------|-------------------------------|---------------|---------------|------------|----------|---------------------------|
| <b>Intersections</b> |                               |               |               |            |          |                           |
| 2                    | Main / S Winooski             | 0.990 - 1.010 | 101           | 0          | 11       | 2.73                      |
| 11                   | Main / S Willard              | 2.110 - 2.130 | 74            | 0          | 13       | 1.89                      |
| 15                   | Main / St. Paul               | 0.250 - 0.270 | 34            | 1          | 9        | 1.80                      |
| 17                   | Main / Prospect               | 0.22 - 0.24   | 73            | 0          | 18       | 1.78                      |
| 41                   | Pearl / Prospect / Colchester | 0.930 - 0.940 | 44            | 0          | 14       | 1.39                      |
| 59                   | Winooski / Pearl              | 1.310 - 1.330 | 58            | 0          | 15       | 1.29                      |

<sup>3</sup> This section includes the intersection with Main Street.

In addition to reviewing the 2010-2014 VTrans HCL report, the latest reported crash data (2011 – 2015) for the study area was reviewed via the online VTrans Public Crash Data Query Tool.<sup>2</sup> Figure 2 below summarizes reported crashes by type within 150 feet of study intersections.

 Page 5

**Figure 2: Study Intersection Crashes by Type**

The following are observations based on a review of reported crash data in the vicinity of the project.

- There was one fatality within the project area which occurred on December 26, 2010 at the Main Street and St. Paul Street intersection. This crash involved through movements only, during freezing precipitation, and had at least one individual under the influence of a controlled substance.
- The Main Street / Winooski Street intersection has the second highest actual/critical ratio of intersections in Vermont. Based on 2011-2015 crash data, this intersection's top crash types include rear ends (32%), sideswipes (24%), and left turn and through movements (10%).
- Across all of the study intersections, the most common crash types at these intersections are rear ends (37%) and sideswipe crashes (21%).
- Across the City, the number of reported crashes is generally consistent from month to month, with a slight increase generally in reported crashes in January and February, likely due to adverse weather conditions. Between 2011 and 2015, the number of crashes reported across Burlington has generally decreased from 1,524 reported crashes in 2011 to 1,345 crashes in 2015.

## 4. Trip Generation

The proposed redevelopment program consists of demolishing a portion of the existing Burlington Town Center Mall between St. Paul Street and Pine Street and constructing a mixed-use town center that includes approximately 965,352 square feet of parking, office, residential, and retail uses. Primary vehicular access and egress is provided to the internal parking garage via mid-block access points on Cherry and Bank Streets. The project is located in the downtown core, surrounded by a dense network of sidewalks and bicycle facilities and directly across the street from the recently completed Green Mountain Transit Downtown Transit Center. The proposed layout of the project is shown in **Figure 3<sup>3</sup>** on the following page.

The proposed redevelopment of the Burlington Town Center includes the following general components:

- Demolition of approximately 130,000 square feet of existing retail space
- Retail – 107,304 square feet (including a market, walk-in medical clinic, restaurants and general retail)
- Preschool – 19,509 square feet
- Office space – 230,328 square feet
- Apartments – 272 units (299,602 square feet)
- Construction of Pine Street and St. Paul Street between Bank Street and Cherry Street to restore the City's street grid in this area and enhance overall connectivity downtown.

In addition, redevelopment will include replacing the existing parking garage (capacity approximately 570 spaces) with a new parking garage which is estimated to have a capacity of approximately 761 vehicles. The project will also incorporate approximately 170 bicycle parking spaces (120 long-term and 50 short-term spaces).

Given the Burlington Town Center's location in downtown Burlington, with its interconnected network of sidewalks and bicycle facilities, and the site's proximity to the new GMT Downtown Transit Center, it is reasonable to assume that a portion of the person-trips generated by the proposed project will occur by foot, by bicycle, or by bus. Further, a number of the likely Town Center tenants are active participants in the Chittenden Area Transportation Management Association (CATMA), an organization that partners with employers to reduce single occupant vehicle trips. Although no specific reduction was taken in the analysis (to remain conservative), the VTrans guidance for Transportation Demand Management (TDM) states that there is an allowable 15% reduction in single occupant vehicle trips when an office is a member of a TMA, has more than 100 employees, and operates out of a mixed-use, moderate transit development<sup>5</sup>.

The modal splits utilized in this trip generation estimate were based on US Census Journey to Work and American Community Survey Data for Burlington and incorporate a 25% bike/walk mode share and a 5% transit mode share.

Mixed use developments such as the Burlington Town Center project generate *internal capture* trips which are defined as trips having multiple destinations within a given project site (for example, a resident of the Burlington Town Center who drops off his or her child at the day care center, then picks up a coffee before departing for work would represent three individual trips, two of which were internally captured within the project site). The level of shared trips/internal capture for this project (8% of AM trips and 12% of PM trips) was determined based on information published by the Transportation Research Board (TRB) in *NCHRP Report 684*.<sup>6</sup>

Figure 4 above calculates the number of net new vehicle trips by accounting for the replacement of a portion of the trips currently generated by the Town Center Mall. The proposed project includes the demolition of approximately 75% of the existing Mall footprint (approximately

<sup>5</sup> VTrans Transportation Demand Management (TDM) Guidance – Draft 2. Vermont Agency of Transportation, Vermont, 2015.

<sup>6</sup> "Enhancing Internal Trip Capture Estimation for Mixed-Use Developments", Transportation Research Board, Washington D.C., 2011.

 December 14, 2016  
 Page 9

130,000 square feet). Within the retained portion of the mall east of St. Paul Street are a number of fairly active retail uses (e.g. L.L. Bean, Starbucks). We conservatively assumed that these stores in the retained mall section will generate 50% of the trips currently occurring at the mall.

## 5. Trip Distribution

The directional distribution of site-generated traffic (after accounting for existing trips currently being generated by the Burlington Town Center) was developed based on a review of the existing travel patterns within Burlington and the surrounding area, a review of previous traffic studies, a review of US Census Journey to Work and American Community Survey Data, and trip distribution data developed through the use of the Chittenden County Regional Planning Commission's regional travel demand model as summarized within the *PlanBTV Transportation Study Final Report*<sup>7</sup> (see **Figure 5** below).

**Figure 5: Source of External Trips Destined for Downtown Burlington (source: Plan BTV Transportation Study, RSG, 2011)**

**Figure 6** shows the general distribution of net new trips generated by the Burlington Town Center across the City and at each of the major access points to downtown Burlington. At each entry point into the City, the figure shows the percentage and number of site-generated trips estimated to travel through that gateway, and the corresponding percentage increase in peak hour traffic at

<sup>7</sup> *PlanBTV Transportation Study: Final Report*, RSG, Inc., October 2011.

FIGURE 5-A

Ref: 57881.00  
December 14, 2016  
Page 10

that location. The graphic also breaks down the trips that remain internal to downtown Burlington between the North End, Downtown and Campus Districts, and South End.

**Figure 6: City-wide Trip Distribution Map**

**Figure 7** below shows the existing weekday evening peak hour trips at the six major gateways into downtown Burlington along with the percentage increase in trips at that gateway resulting from the project. As the figure shows, the proposed Burlington Town Center is not anticipated to increase traffic along any of the City's main gateways by more than 4% during the weekday evening peak hour.

**Figure 7: Projected Increase in PM Peak Hour Trips on Major Gateways**

| Gateway               | PM Peak Hour   |                   | % Increase |
|-----------------------|----------------|-------------------|------------|
|                       | Existing Trips | Town Center Trips |            |
| North Ave             | 1,127          | 43                | 4%         |
| Route 127             | 1,589          | 65                | 4%         |
| Colchester Ave        | 2,461          | 108               | 4%         |
| Pine St               | 1,483          | 32                | 2%         |
| Shelburne Road (US 7) | 2,563          | 76                | 3%         |
| Main St (US 2)        | 3,505          | 162               | 4%         |

A more detailed figure showing weekday AM and PM peak hour trip generation on the adjacent street network can be found in the Appendix.

## 6. Traffic Networks

The weekday morning and weekday evening peak periods were selected for analysis purposes as they represent the peak conditions for the both the site-generated traffic and the adjacent street system. Turning movement count data at the 18 study intersections was obtained from recent counts conducted by VHB and the Chittenden County Regional Planning Commission. To evaluate the impact of the proposed development within the study area, AM and PM peak hour traffic volumes were projected to the opening year (2019) and a 5-year forecast horizon (2024). Copies of the traffic volume count data are provided in the Appendix.

### 6.1 Seasonal Variation

Since it is impractical to design for the highest volume encountered during the year, VTrans guidelines recommend using the Design Hourly Volume (DHV), which generally represents the 30<sup>th</sup> highest hourly volume of the year, traffic analysis and design. Historical data from the closest, most comparable VTrans Automatic Traffic Recorder (ATR) stations in Burlington were reviewed to establish appropriate DHV adjustment factors.<sup>8</sup> Detailed calculations for the DHV adjustments are provided in the Appendix.

<sup>8</sup> ATR stations D162, D161, D096, and D155 are located on Main Street, between S Willard Street and S Prospect Street, Main Street between S Willard Street and S Union Street, Battery Street south of Pearl Street, and Pearl Street west of Prospect Street, respectively.

## 6.2 Background Growth

Traffic growth is a function of expected land development in the region. To predict a rate at which traffic can be expected to grow during the forecast period, historical traffic growth was examined. The regression analysis chart in the 2015 VTrans Redbook<sup>9</sup> for the urban street group suggests that traffic is anticipated to grow by approximately 0.5% annually. Any background growth factors were taken directly from the tables in the 2015 Redbook.

Conversations with the City of Burlington Planning Department staff revealed that there were two projects currently under consideration in the vicinity of the Town Center that should be considered in this analysis. The two developments are the Cambrian Rise project on North Avenue and a housing development on Fletcher Place, off of Colchester Avenue. Trip generation figures for the Cambrian Rise project were based on preliminary estimates prepared by RSG<sup>10</sup> and were incorporated into the background traffic volumes. The Fletcher Place housing development's trip generation was calculated using ITE trip generation rates for 75 units of single-family housing and incorporated into the background traffic volumes.

## 6.3 No Build and Build Traffic Networks

The 2019 and 2024 No Build traffic volumes were developed by applying growth factors from the VTrans regression analysis chart for urban roadways to DHV-adjusted peak hour traffic volumes. The 2019 and 2024 No Build weekday morning and weekday evening peak hour volumes are shown in **Figure 8** and **Figure 9**.

Based on the expected trip distribution methodology summarized previously, the site-generated trips were added to the 2019 and 2024 No Build peak hour traffic volumes to establish the 2019 and 2024 Build networks. The Build networks are shown in **Figure 10** and **Figure 11**.

As requested by the City's Department of Public Works, the 2024 forecast year traffic volumes were adjusted to account for the effects of the Champlain Parkway. Traffic volume projections from the *Southern Connector/Champlain Parkway MEGC-M5000(1)* study prepared by CHA were used to establish the necessary traffic volume adjustments along Main Street in the 2024 No Build and Build scenarios.<sup>11</sup>

## 7. Traffic Analyses

Intersection capacity analyses were performed for all of the study area intersections. Levels of service (LOS) were calculated based on the criteria published in the *2000 Highway Capacity Manual*.<sup>12</sup> Level of service is the term that defines the conditions that may occur on a given roadway or at an intersection when accommodating various traffic volume loads. Levels of service range from A to F with LOS A representing generally free flowing operating conditions and LOS F representing generally congested conditions. Copies of the LOS calculations are provided in the Appendix.

### 7.1 Signalized Intersections

**Table 3** and **Table 4** summarize the operational analysis at the *signalized* study area intersections during the 2019 and 2024 weekday morning and evening peak hours under No Build and Build conditions. The 2019 and 2024 Build scenarios include the new Pine Street and St. Paul Street blocks between Cherry and Bank Streets as well as new traffic control signals at the Pine Street/Bank Street and Pine Street/Cherry Street intersections.

As shown in the two tables, all of the signalized intersections were found to operate at LOS D or better in each of the No Build and Build scenarios. Volume-to-capacity ratios also remain less than 1.0 at the signalized intersections under all scenarios. On average, the trips generated by the project increase signalized intersection delay by 4-5 seconds during the peak hours.

## 7.2 Unsignalized Intersections

**Table 5** and **Table 6** summarize the operational analysis at the *unsignalized* study area intersections during the 2019 and 2024 weekday morning and evening peak hours under No Build and Build conditions.

As shown in the two tables, all unsignalized intersection approaches are anticipated to operate at LOS of C or better and none of the unsignalized approaches exceed a v/c ratio of 0.51.

## 8. Conclusions

The proposed redevelopment of the Burlington Town Center includes the following general components:

- Demolition of approximately 130,000 square feet of existing retail space
- Retail – 107,304 square feet (including a market, walk-in medical clinic, restaurants and general retail)
- Preschool – 19,509 square feet
- Office space – 230,328 square feet
- Apartments – 272 units (299,602 square feet)
- Construction of Pine Street and St. Paul Street between Bank Street and Cherry Street to restore the City's street grid in this area and enhance overall connectivity downtown.

The trip generation estimates conducted for this study indicate that the proposed redevelopment program will generate approximately 300 net new vehicle trips (206 entering and 94 exiting) during the weekday morning peak hour and 539 net new vehicle trips (229 entering and 310 exiting) during the weekday evening peak hour. The site-generated trips were distributed onto the downtown street network based on a review of the existing travel patterns, a review of previous traffic studies, a review of US Census Journey to Work and American Community Survey Data, and trip distribution data developed through the use of the CCRPC regional travel demand model.

From a traffic operations perspective, all of the signalized intersections were found to operate at LOS D or better in each of the No Build and Build. Volume-to-capacity ratios at the signalized intersections also remain less than 1.0 under all scenarios. On average, the trips generated by the project increase signalized intersection delay by 4-5 seconds during the peak hours. Further, it was determined that the site generated trips did not increase traffic volumes on any of the main arterials into Burlington by more than 4% over current peak hour volumes.

As demonstrated in this report, the City of Burlington's existing grid street network, transit facilities, sidewalk network, and bicycle facilities adequately accommodate the additional trips generated by the Town Center. Several important aspects of the project contribute to this overall accommodation of site-generated trips including:

- The project is located in the downtown core of Burlington, surrounded by a dense network of sidewalks and bicycle amenities and directly across the street from the recently completed Green Mountain Transit Downtown Transit Center. The proximity and availability of these amenities will result in a significant number of site-generated trips occurring by non-automobile mode (e.g. by foot, by bicycle, and by bus).
- A number of the likely Town Center tenants are active participants in the Chittenden Area Transportation Management Association (CATMA), an organization that partners with employers and employees to reduce single occupant vehicle trips.

- The density and mix of uses proposed for the project will likely result in a number of trips occurring entirely *within* the Town Center (e.g. apartment to daycare or office to restaurant), and thus not impacting the adjacent street network.
- An important aspect of the project is the proposed construction of Pine Street and St. Paul Street between Bank Street and Cherry Street to restore the City's street grid in this area. In addition to improving overall downtown connectivity, the new blocks of Pine Street and St. Paul Street will enhance bus accessibility from the Downtown Transit Center and create new routes for existing cross-town trips, thereby reducing overall delay on parallel north-south streets including Battery Street and South Winooski Avenue.
- New traffic signals are proposed at the Pine Street/Cherry Street, Pine Street/Bank Street, and St. Paul Street/Cherry Street (integrated with Downtown Transit signals) which will accommodate both site-generated trips, newly re-routed cross-town trips, and buses departing from the Downtown Transit Center.
- The City's traffic impact fees generated by the project can be used to further optimize traffic signals and enhance corridor signal coordination plans.

In conclusion, based on the results of this Traffic Impact Study, the Burlington Town Center project is not expected to generate unreasonable congestion or unsafe conditions within Burlington's transportation system.

## 2010 TO 2015 GROWTH FACTORS

The 5-year growth factors shown in the tables below are based on AADTs from VTrans Continuous Traffic Counters (CTC). Each CTC is assigned to a Growth Factor Group and the factors for each group are calculated based on the average ratio of the 2015 AADT to the prior year AADT for each CTC in the group.

| Growth Factor Group 1: Rural<br>- This is the default group if a location does not fit another group - |      |      |      |      |      |  |
|--------------------------------------------------------------------------------------------------------|------|------|------|------|------|--|

| 2010                                                                | 1.00 |      |      |      |      |  |
| 2011                                                                | 1.02 | 1.00 |      |      |      |  |
| 2012                                                                | 1.03 | 1.04 | 1.00 |      |      |  |
| 2013                                                                | 1.05 | 1.07 | 1.05 | 1.00 |      |  |
| 2014                                                                | 1.07 | 1.11 | 1.10 | 1.03 | 1.00 |  |
| 2015                                                                | 1.08 | 1.14 | 1.15 | 1.05 | 1.04 |  |

Example: Project the 2012 AADT at D053 on I-89 to Year 2015

2012 AADT = 29,300

$GF_3(2012 \rightarrow 2015) = 1.04$

2015 AADT =  $29,300 \times 1.04 = 30,472$

Round to the nearest hundred = 30,500

## 2015 AADT GROWTH FACTORS

The factors in the table below may be used to project current year AADTs to a future year. They are applicable on all routes statewide.

The factors are based on a 2015 to 2035 20-year AADT growth factor of 1.12 which was developed from Vermont economic and labor statistics.

| TO FUTURE<br>YEAR | FROM CURRENT YEAR |      |      |
|-------------------|-------------------|------|------|
